Survey design and methodology

- Online survey conducted amongst a random sample of small business owners/senior managers from organisations with fewer than 20 employees
- The survey was conducted in November and December 2023.
- The findings for the survey come from <u>4,222 small businesses</u> in <u>11 markets</u> across Australia, Mainland China, Hong Kong, India, Indonesia, Malaysia, New Zealand, Philippines, Singapore, Taiwan, and Vietnam. From the commencement of the survey in 2009, we have surveyed over 43,000 small businesses across the region
- There were 501 respondents from Australia, 753 from Mainland China, 324 from Hong Kong, 505 from India, 302 from Indonesia, 308 from Malaysia, 303 from New Zealand, 303 from the Philippines, 302 from Singapore, 311 from Taiwan and 310 from Vietnam

Major results

Major results

2024 is expected to be a better year for many of the region's small businesses than 2023 was

Most markets reported an

increase in the number of

small businesses that grew

in 2023 compared with

2022

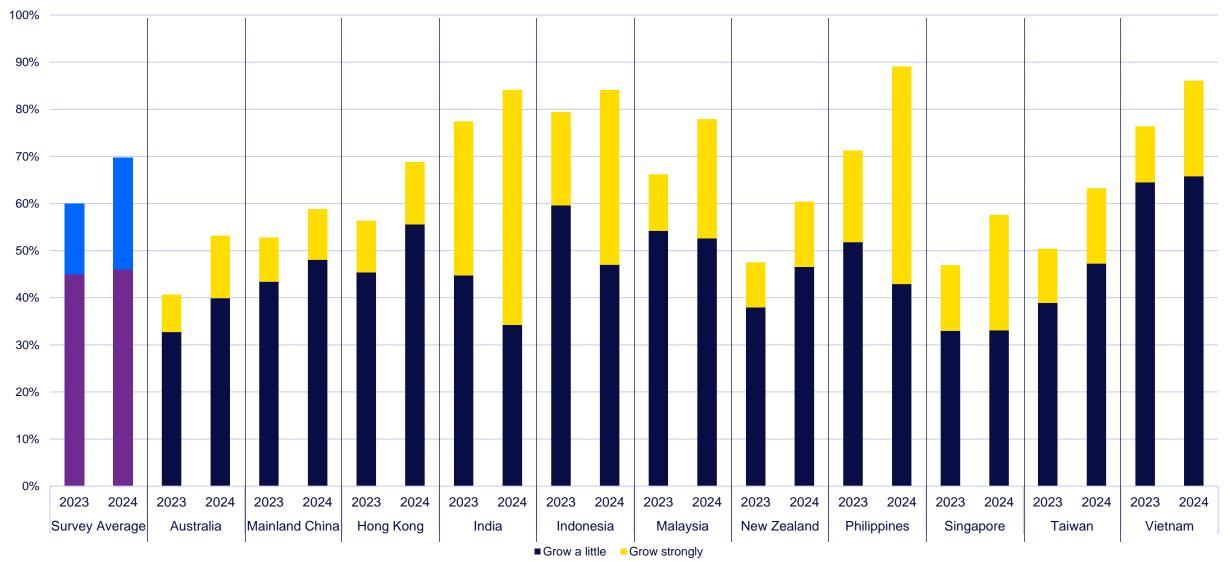

7777

Many small businesses reported that their actual performance in 2023 did not meet expectations

\$

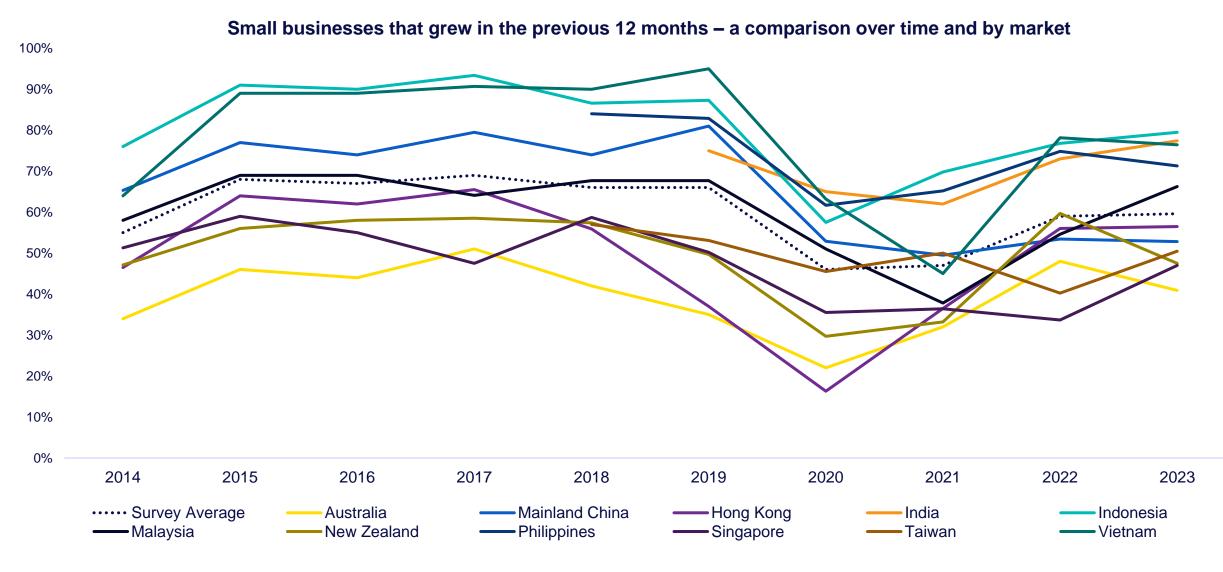

Younger respondents remain significantly more likely to be associated with small businesses that are growing

2024 is expected to be a better year than 2023 for many of the region's small businesses

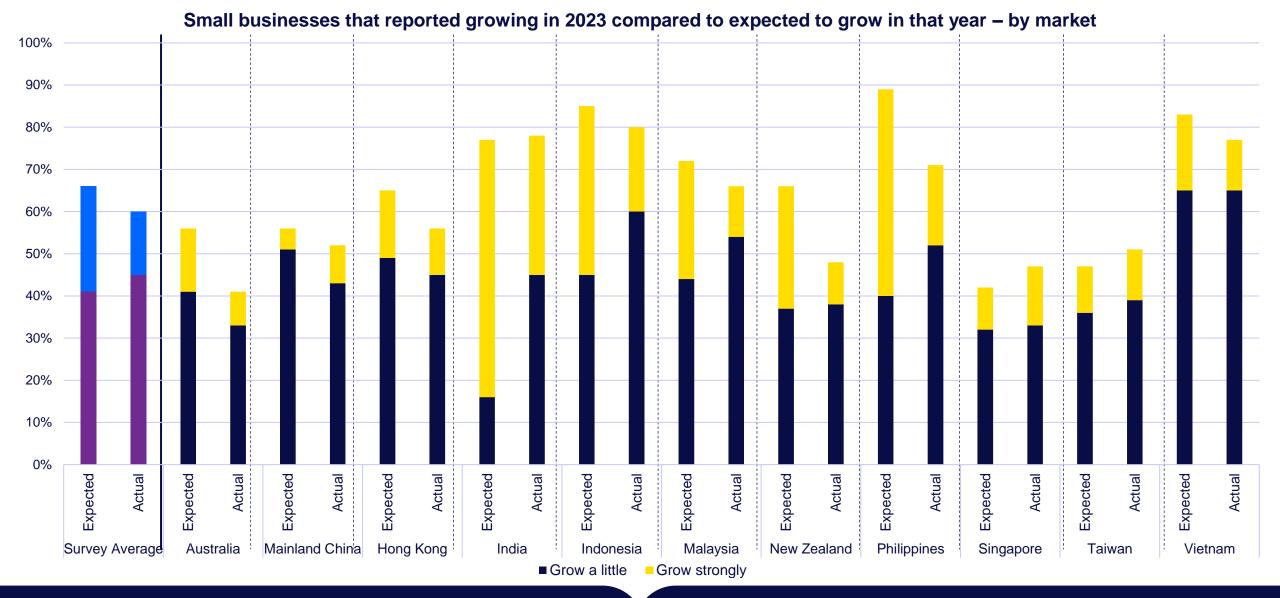

Small business growth – experience in 2023 compared with expectations for 2024 – by market

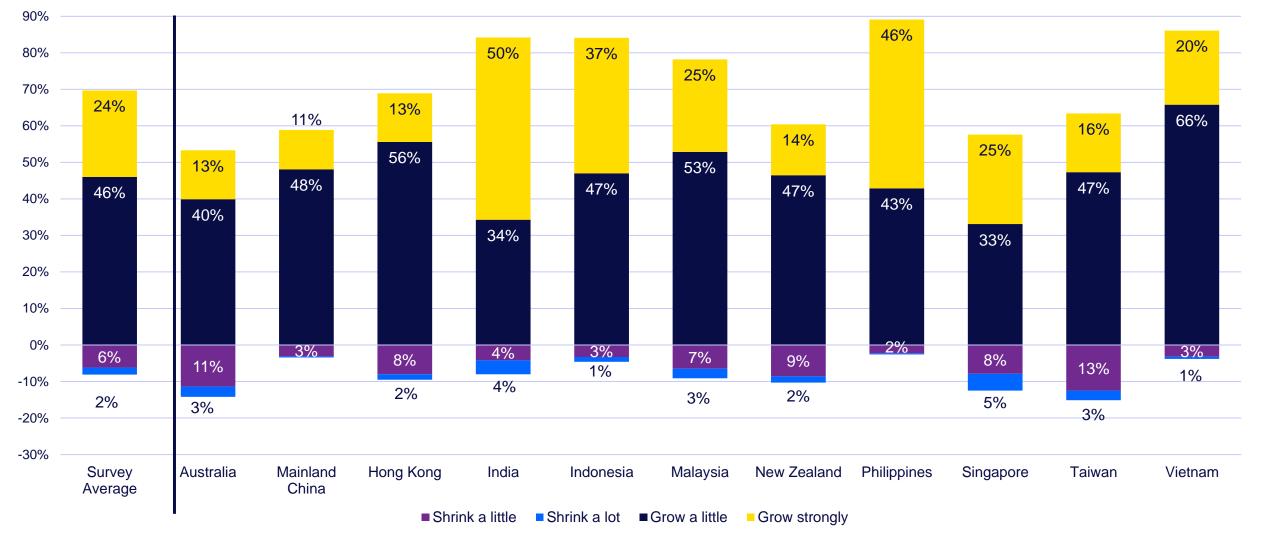

Many small businesses across the region are on the path to recovery following COVID-19

Some small businesses found their performance in 2023 did not meet expectations

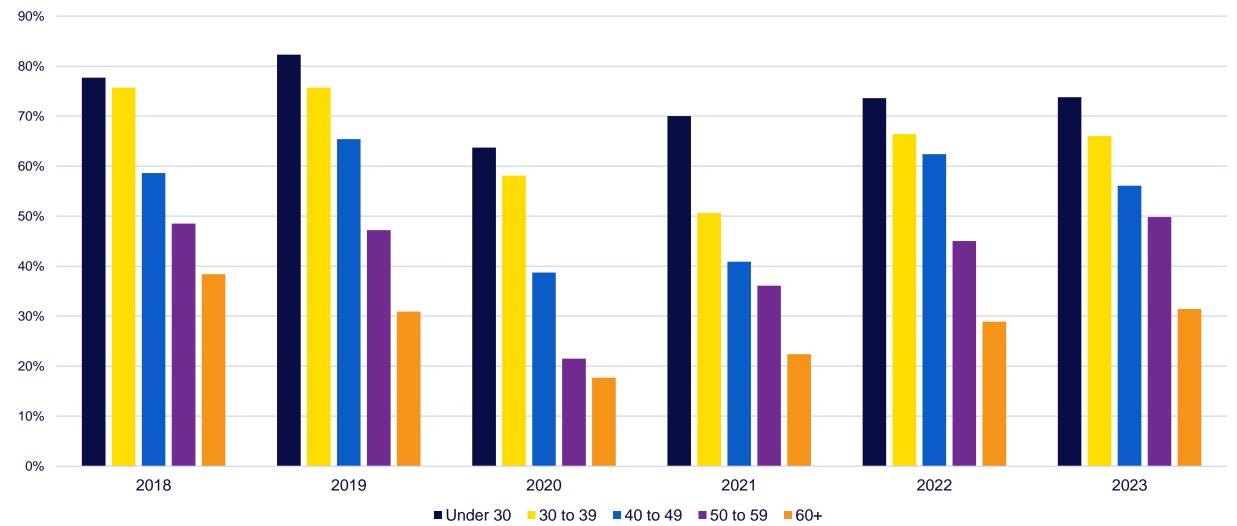

Most small businesses in the region expect to grow in 2024

Small business growth expectations for 2024 – by market

Small businesses owned or run by someone under 40 remain significantly more likely to grow

Small businesses that grew in past 12 months – by age of respondent and over time

CHARACTERISTICS OF HIGH-GROWTH SMALL BUSINESSES

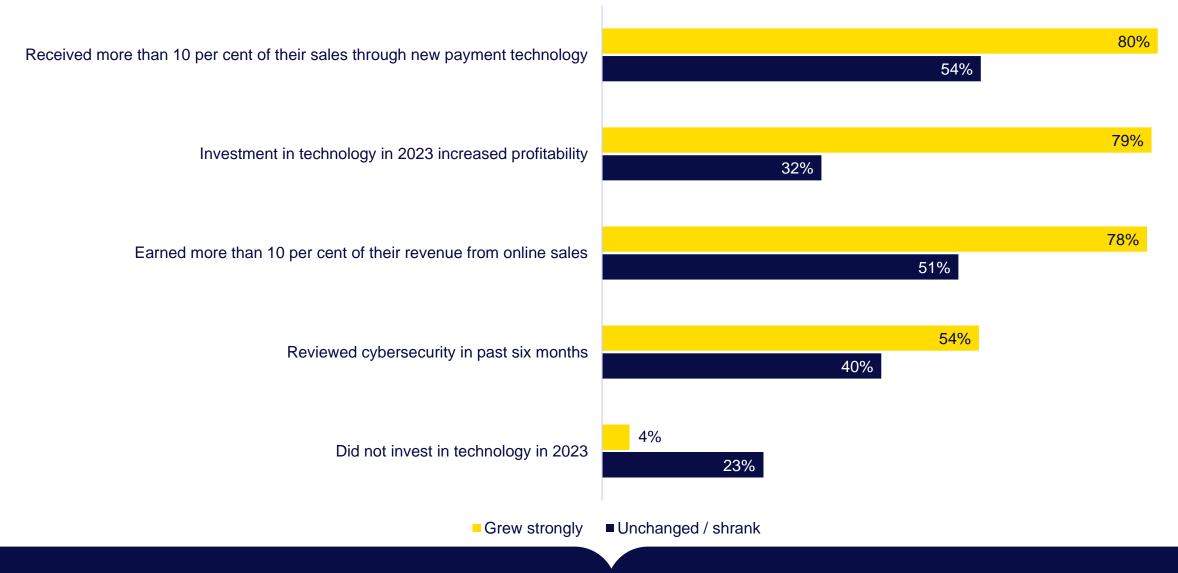

Characteristics of highgrowth small businesses

| Make online sales | Receive sales through new payment technologies such as PayPal, WeChat Pay and Buy Now Pay Later | Use social media to promote their business, sell products/services and communicate with customers |
|--|---|---|
| Invest in technology that quickly improves their profitability | Focus on customer satisfaction, business strategy, business management and technology | Innovate through the introduction of new products, services or processes |
| Expand into overseas markets | Seek professional advice, especially from IT and business consultants | Protect their business from cyberattacks |
| Be owned or managed by someone under 40 years old | Been operating between five to 20 years | Have between 10 to 19 employees |
| | Be in the technology sectors | |

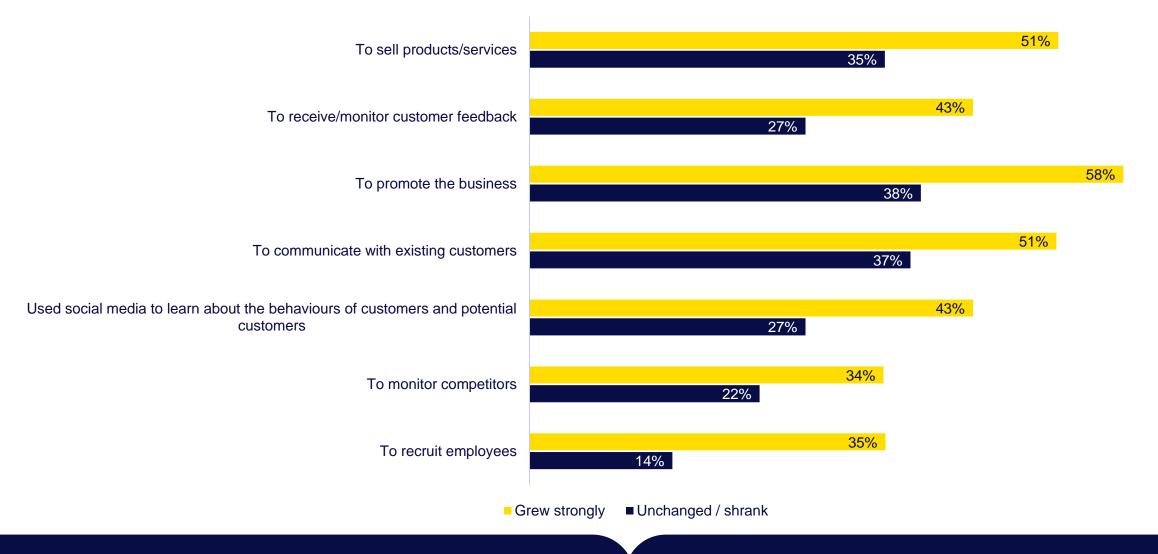

Technology continues to be more important for high-growth businesses than other businesses

Technology uptake by high growth businesses compared to those not growing

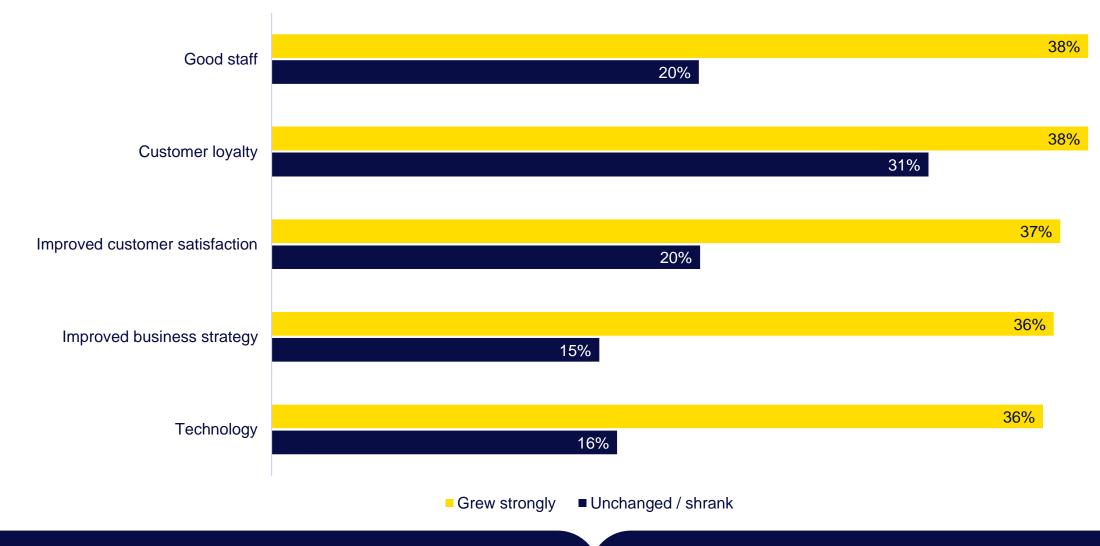

High growth businesses are more likely to use social media for a variety of purposes

Social media use by high growth businesses compared to those not growing

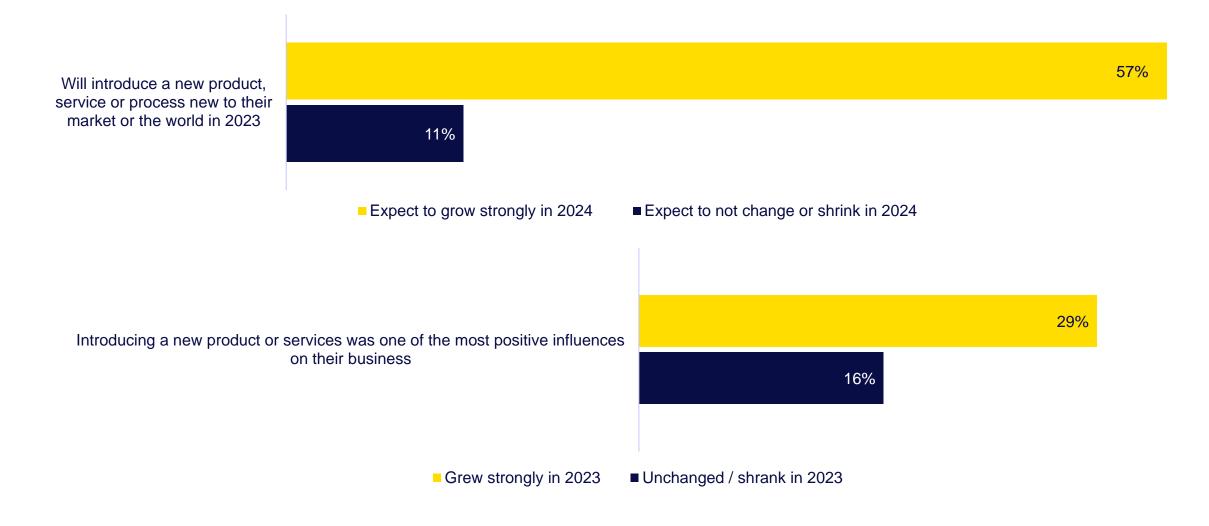

High growth businesses are significantly more likely to find that good staff, improving customer satisfaction, improving business strategy and technology are positive influences on their business

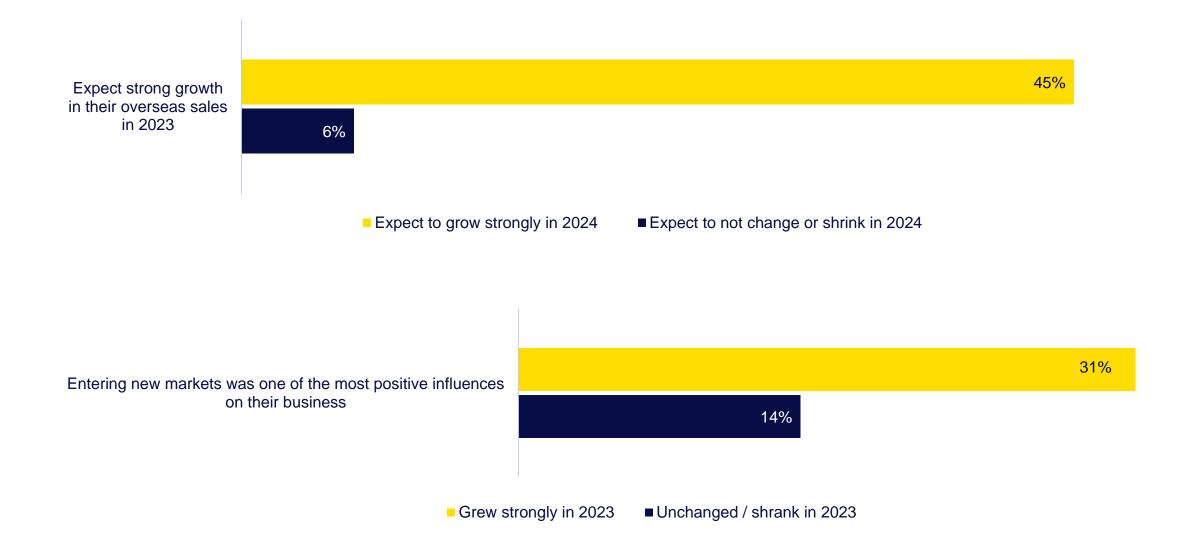

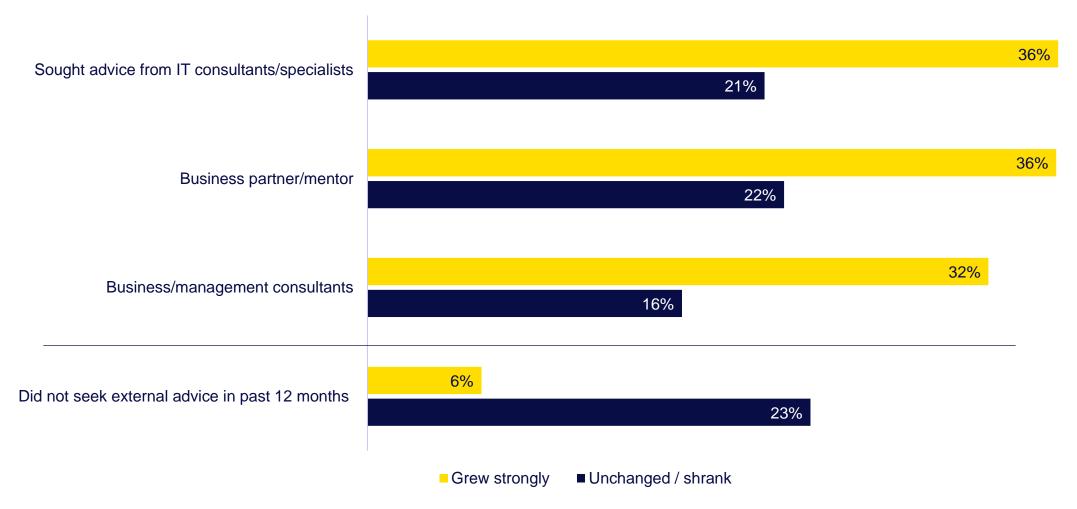

High growth businesses are significantly more likely to innovate

High growth businesses are significantly more likely to expect to export in 2024

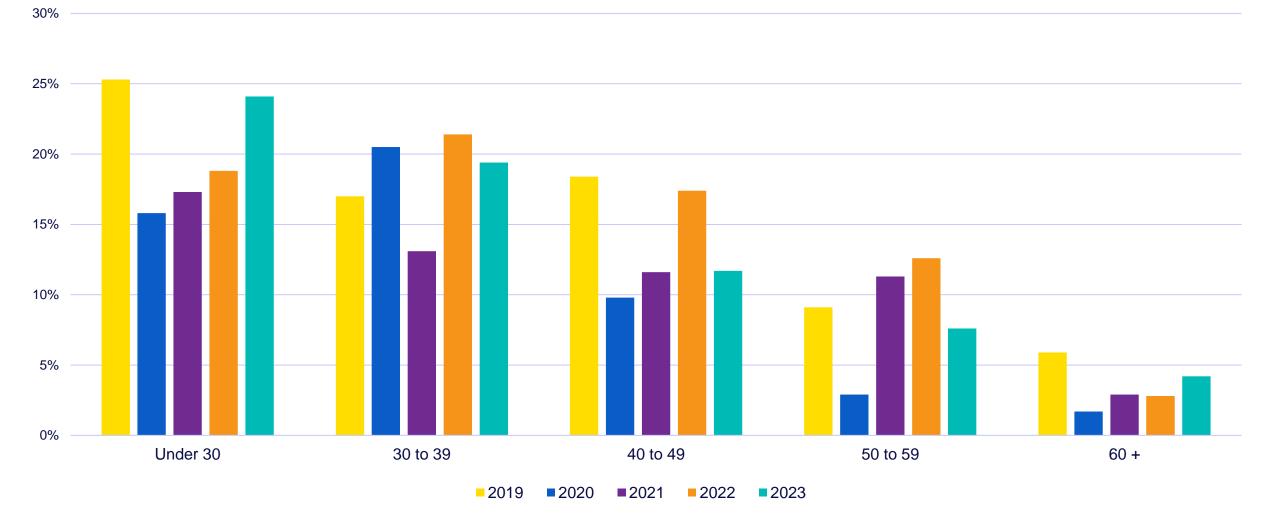

High growth businesses are more likely to seek professional advice

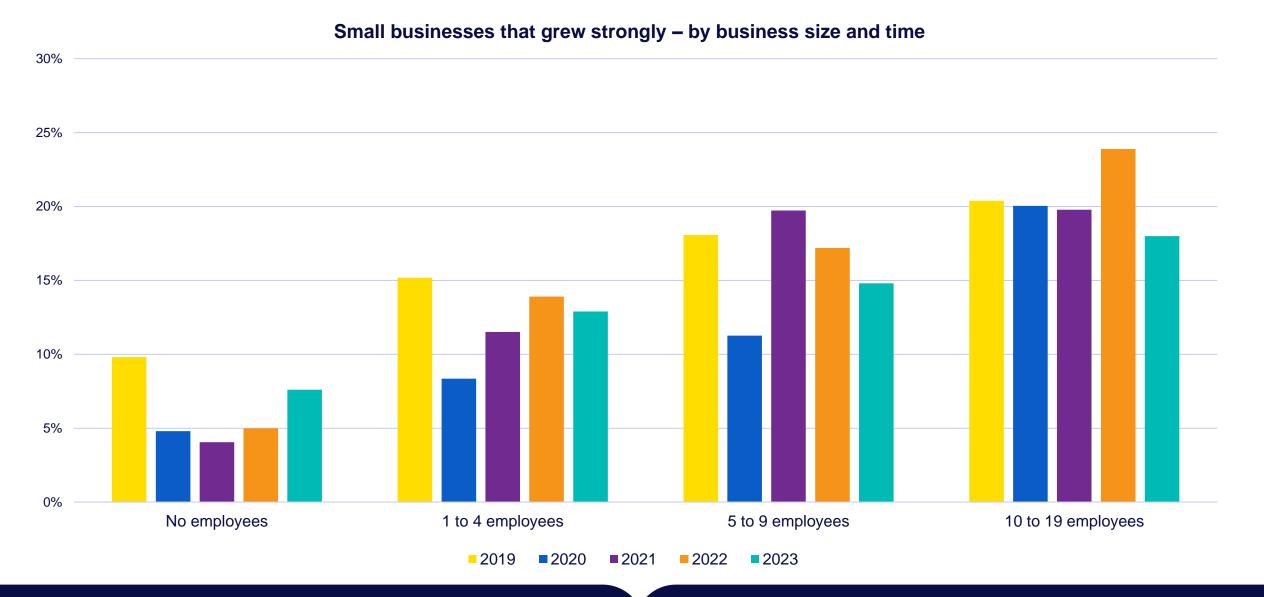

Major sources of advice for high growth businesses in 2023 compared to those and those not growing

High growth businesses continue to be more likely to be owned or managed by younger respondents

Small businesses with more employees are more likely to grow strongly

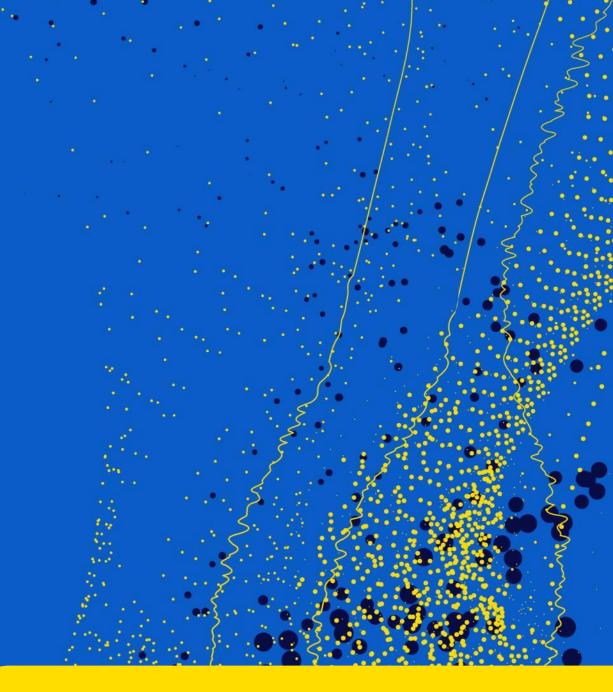

Top-five industries with the most high-growth small businesses in 2023

- 1. Information, media and telecommunications 22%
- 2. Utilities 20%
- 3. Rental, hiring and real estate services & healthcare and social assistance 19%
- 4. Banking, finance or insurance & Mining– 18%
- 5. Public administration and safety 18%

Top-five industries with the most small businesses that were unchanged or shranked in 2023

- 1. Rental, hiring and real estate services -45%
- 2. Administrative and support services 44%
- 3. Transport and warehousing 43%
- 4. Manufacturing 42%
- 5. Wholesale trade 41%

Small business and technology

SELLING ONLINE

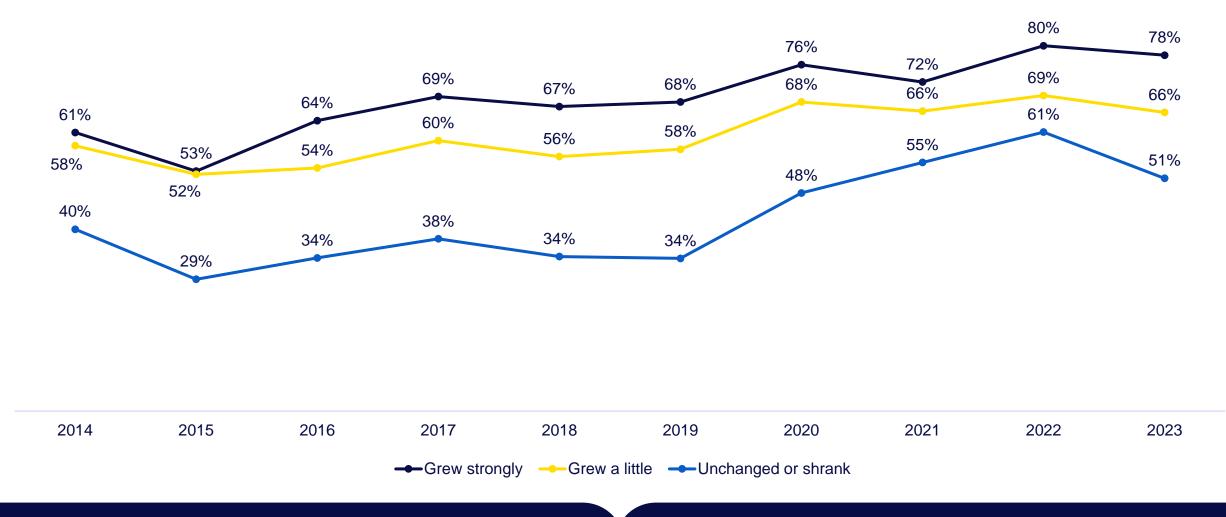

Impact of selling online

- High growth businesses remain much more likely than other businesses to generate at least 10 per cent of their sales through selling online.
- Hong Kong's small businesses have taken the lead in the region in selling online, with Vietnam and Mainland China close behind.
- Australian and New Zealand small businesses continue to be the least likely to generate online sales, with both countries experiencing a decrease in online sales in 2023 compared to 2022.
- Older respondents, older businesses and micro businesses continue to be significantly less likely to sell online. This may be due to a lack of knowledge on how to apply this technology or they remain focused on selling through more traditional means.
- Businesses that didn't grow in 2023 are much more reliant on online sales than they were pre-pandemic. However, the percentage of those businesses selling online has decreased compared to 2022.

High growth businesses are significantly more likely to sell online than businesses that aren't growing

Percentage of businesses earning more than 10 per cent of revenue online – by whether they grew or not and over time

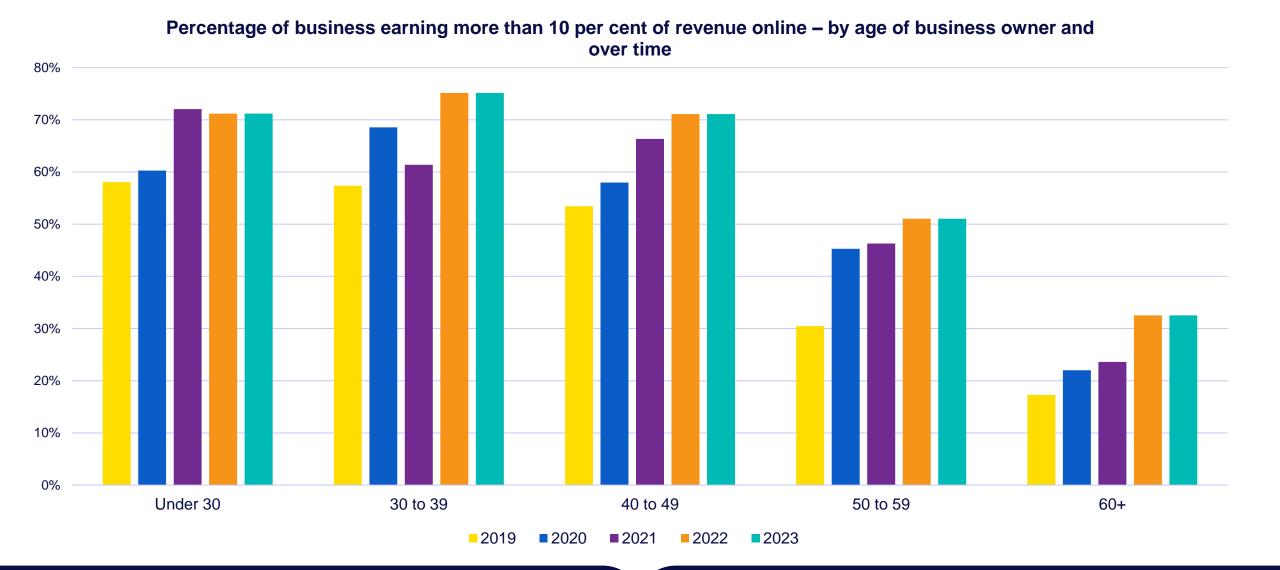

Small businesses were somewhat less likely to sell online in 2023 than 2022

90% Survey average 2023 (62%) 80% 70% Survey average 2022 (68%) Survey average 60% 2021 (61%) Survey average 2020 (58%) 50% Survey average 2019 (51%) 40% 30% 20% 10% 0% Australia Mainland Hong Kong India New Zealand Philippines Singapore Vietnam Indonesia Malaysia Taiwan China

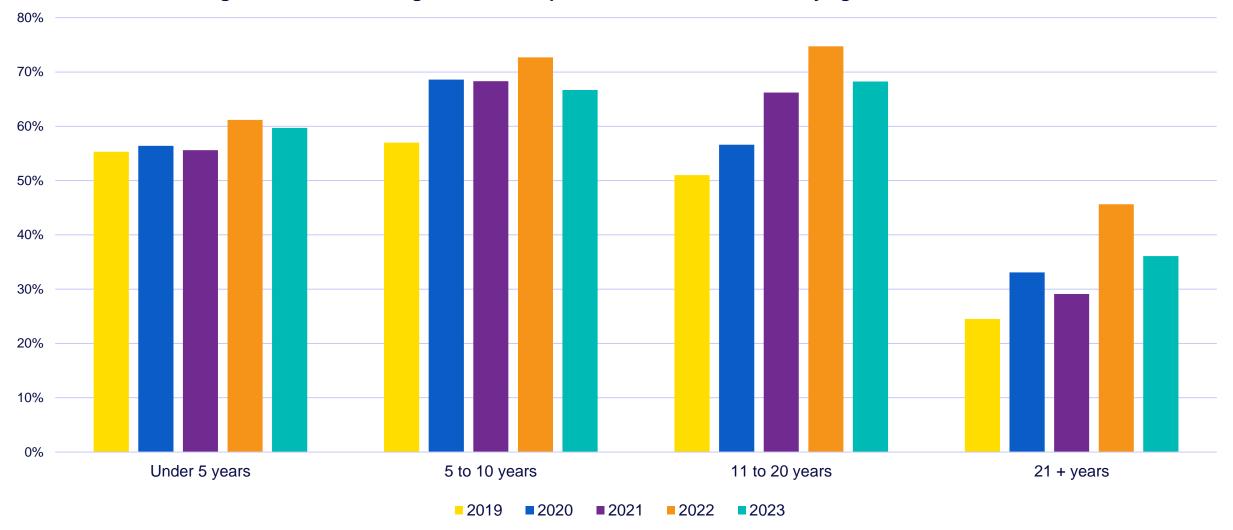

Percentage of business earning more than 10 per cent of revenue online – by market and time

■ 2019 **■** 2020 **■** 2021 **■** 2022 **■** 2023

Younger respondents are more likely to own or manage small businesses that are selling online

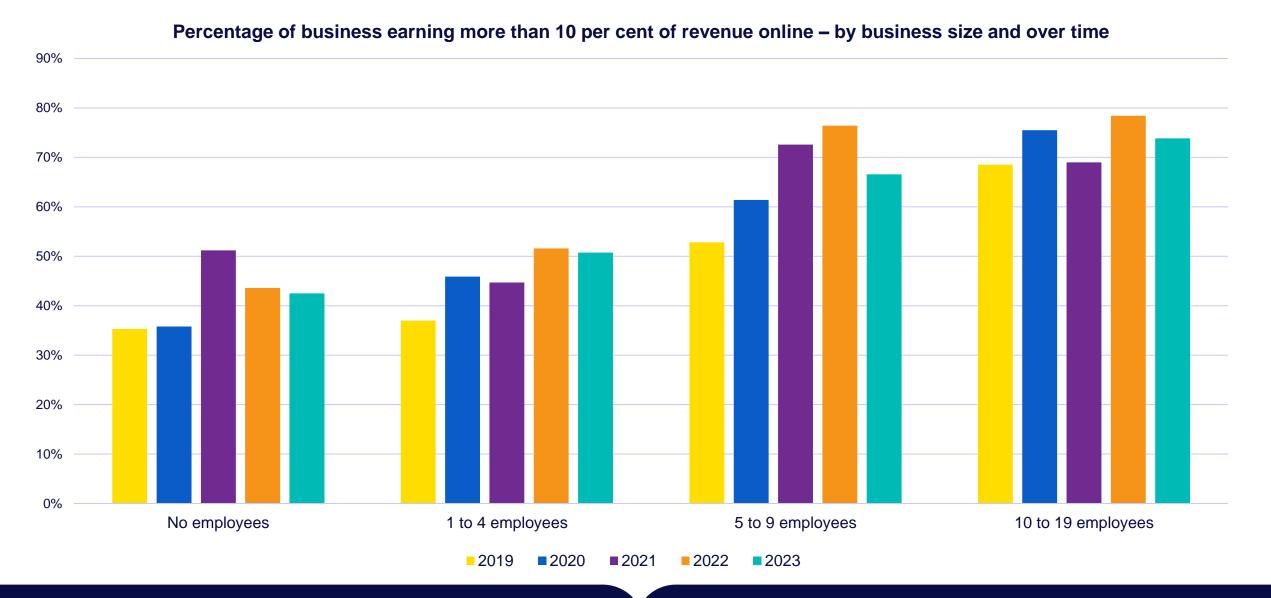

Businesses established for over 20 years are less likely to sell online

Percentage of business earning more than 10 per cent of revenue online – by age of business and over time

Small businesses with five or more staff are more likely to sell online

NEW PAYMENT TECHNOLOGIES

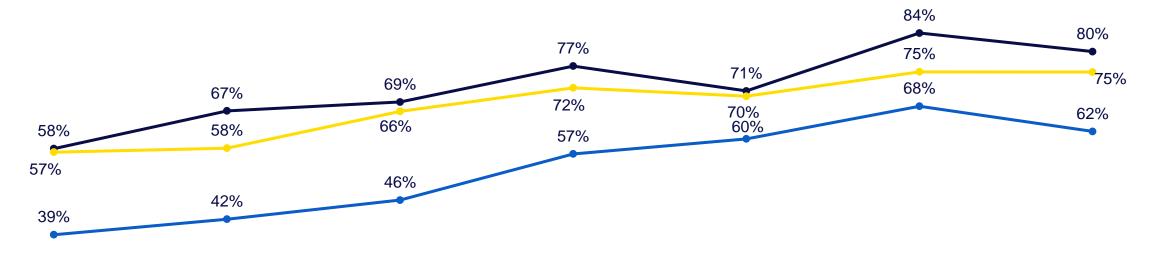

Offering new payment technologies

- High growth businesses remain more likely than other businesses to receive more than 10 per cent of their sales through new payment technologies such as PayPal, WeChat Pay, Apple Pay and buy now pay later. However, the slowdown in online sales in 2023 may have contributed to a decrease in sales made through such payment technology in that year.
- Mainland China's small businesses continue to lead the region in offering new payment technologies to their customers, with Hong Kong and Vietnam close behind.
- It's difficult to find a small business in Mainland China that's not selling online and allowing customers to pay through new technologies.
- New Zealand and Australian small businesses continue to be the least likely to offer new payment options to customers. Small businesses from those markets are however highly unlikely to rely on cash sales. Previous survey data suggests they rely heavily on well established payment services such as EFTPOS.
- As with selling online, older respondents, older businesses and micro businesses continue to be significantly less likely to
 offer new payment technologies to their clients. This may be due to a lack of knowledge of how to apply such technologies
 in their business and concerns over the cost of such technologies, for example, transaction fees.

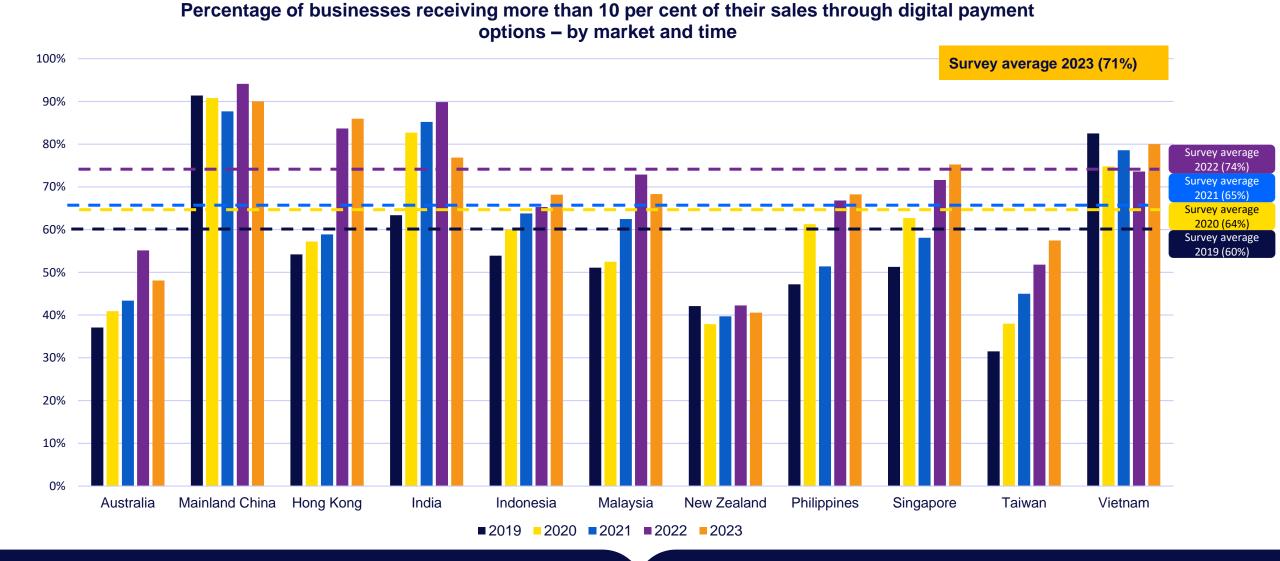

High growth small businesses are more likely to offer new payment technologies to customers

Percentage of businesses receiving more than 10 per cent of their sales through new payment technologies – by whether they grew or not, and over time

Businesses with a high reliance on e-commerce are more likely to offer new payment technologies to customers

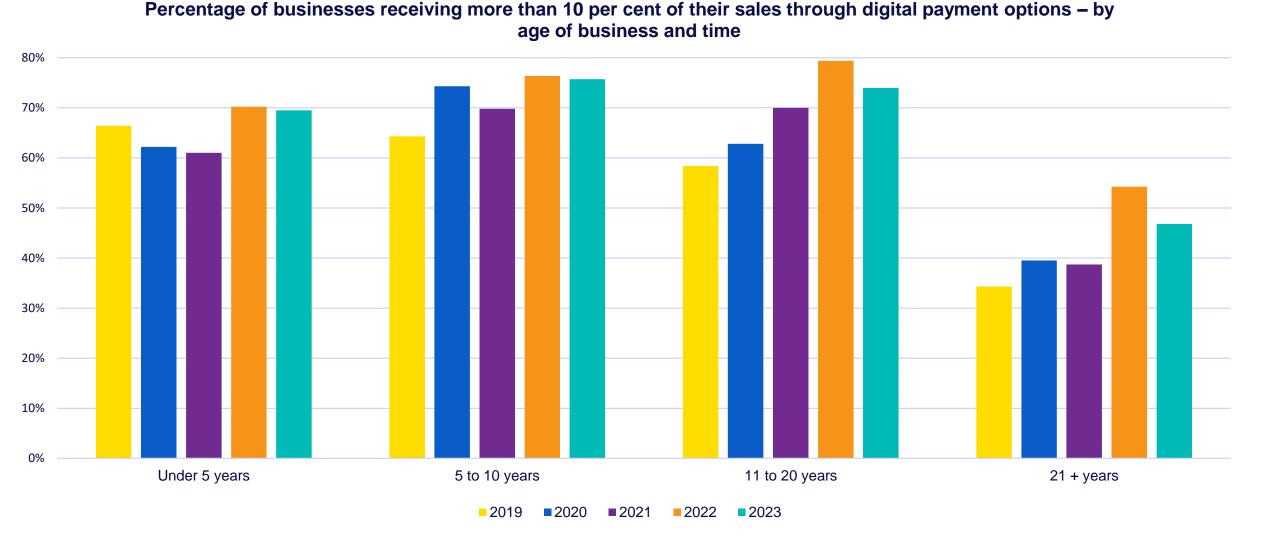

Small businesses owned or managed by respondents under 50 are more likely to receive payments through new payment technologies

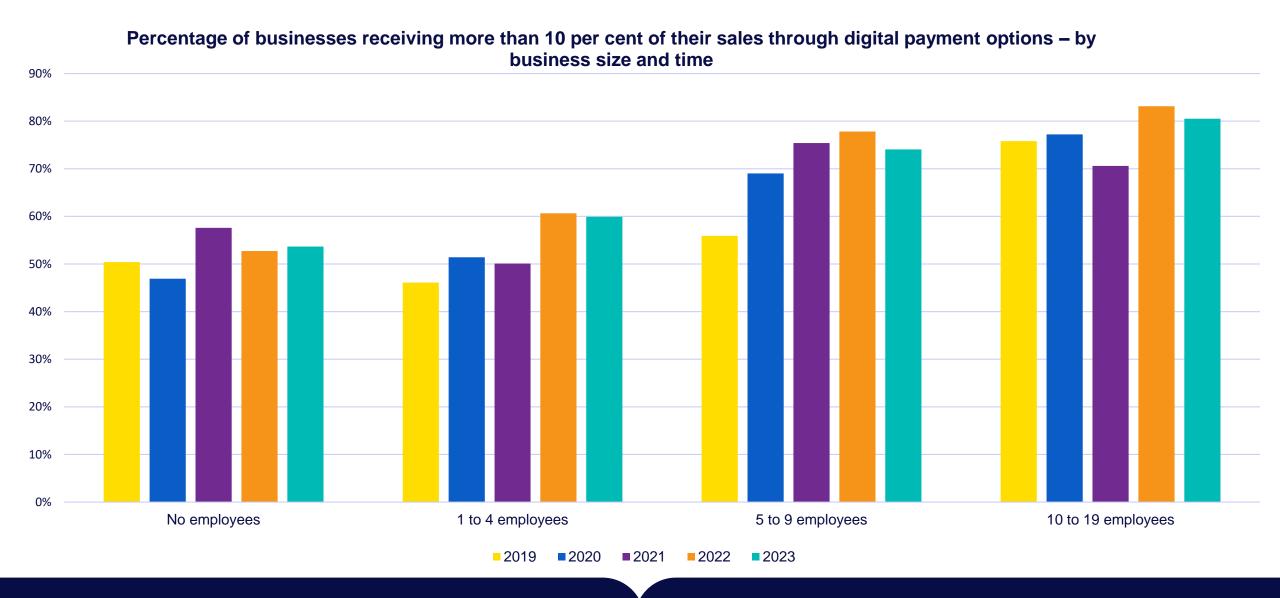

Percentage of businesses receiving more than 10 per cent of their sales through digital payment options – by age and time

Businesses established for over 20 years remain significantly less likely to offer new payment technologies to customers despite recent improvements

Small businesses with 10 to 19 employees are significantly more likely to offer new payment technology options to customers than micro businesses

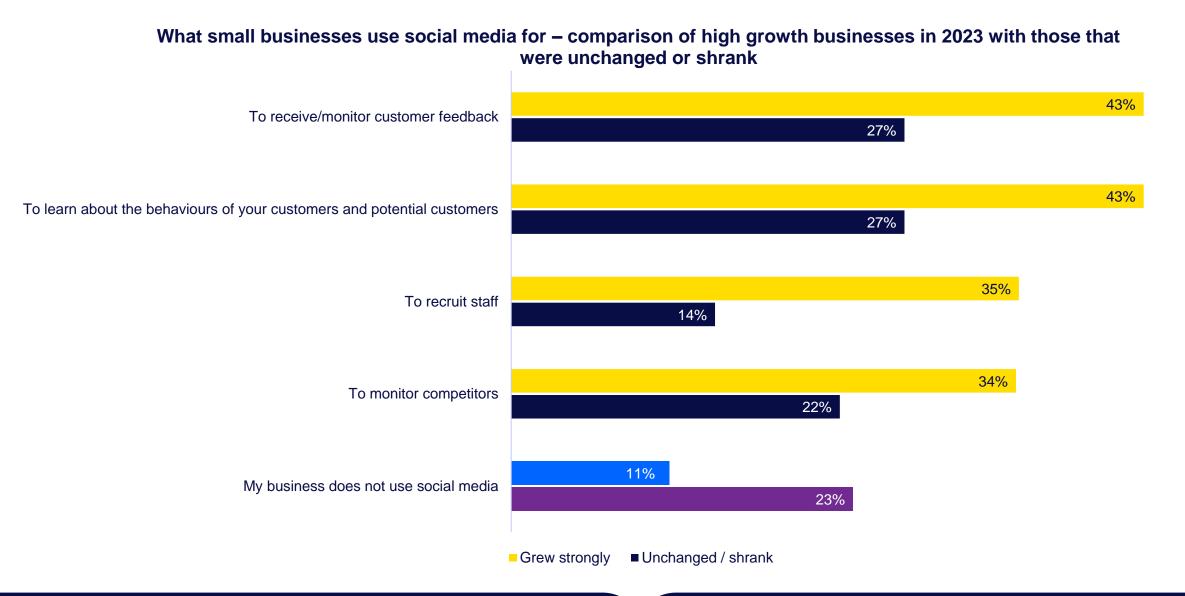

SOCIAL MEDIA USE

Using social media for business purposes

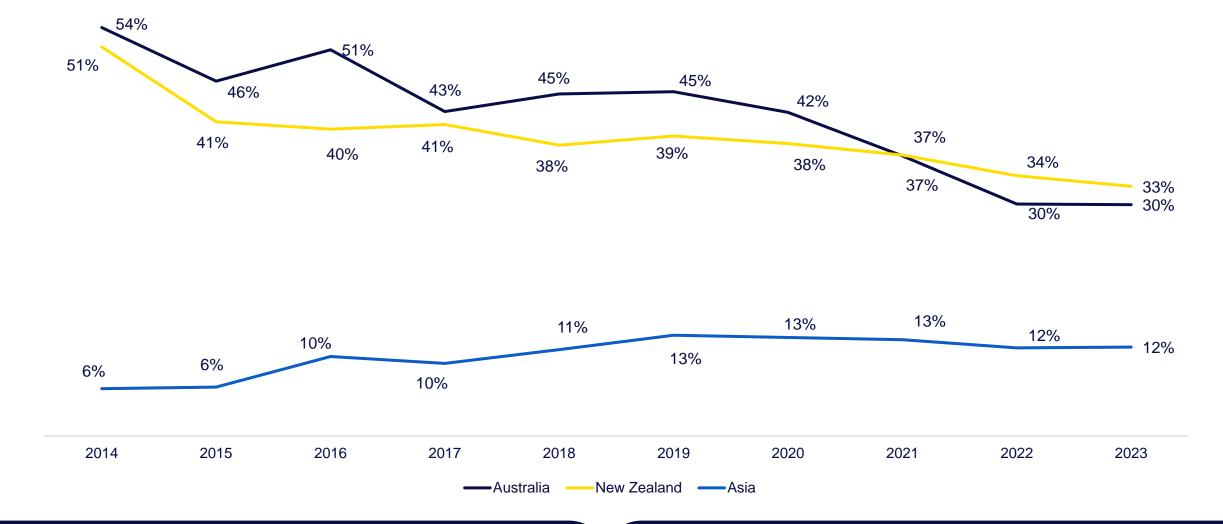

- Growing businesses continue to be more likely to use social media in their business and to use it in a variety of ways.
- It's common for most small businesses to use social media to market their business and communicate with customers and
 potential customers. High growth businesses however are more likely to use social media for other purposes including:
 - to receive or monitor customer feedback
 - · learn about the behaviours of customers and potential customers
 - recruit staff
 - monitor competitors.
- Australian and New Zealand small businesses continue to be the most likely to not use social media for business purposes.
- As with selling online, older respondents, older businesses and micro businesses continue to be significantly more likely to *not* use social media for business purposes. This may be due to a lack of knowledge on how to use social media in their business.

High growth businesses are more likely to use social media for a variety of reasons

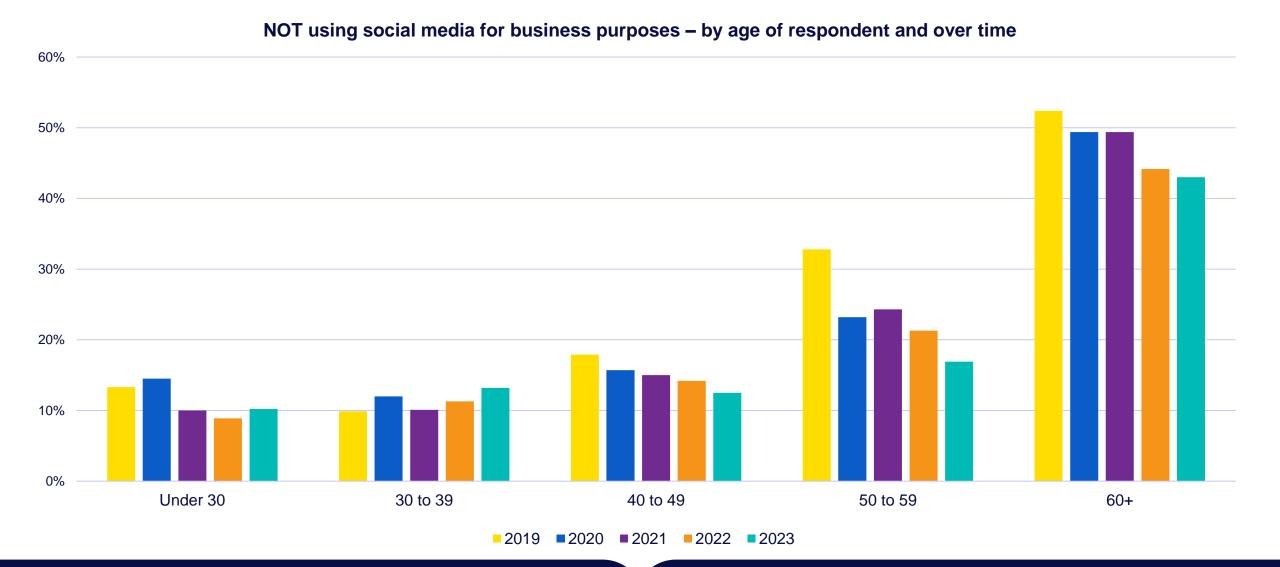

Australian and New Zealand small businesses remain the most likely to *not* use social media

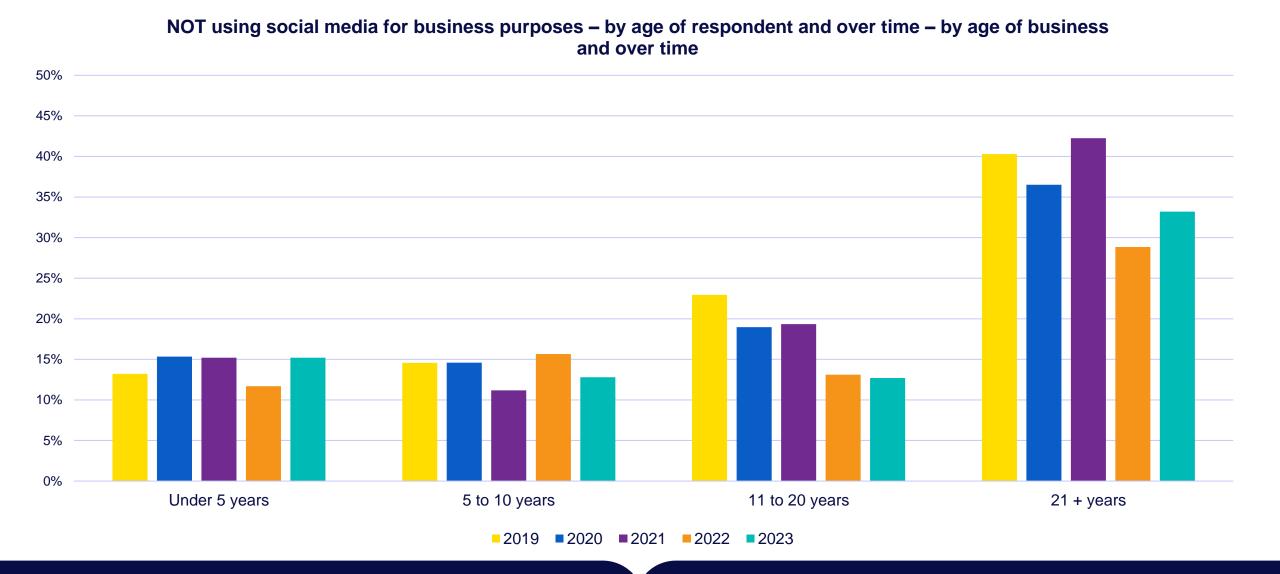

NOT using social media for business purposes – Australia and New Zealand compared with Asia

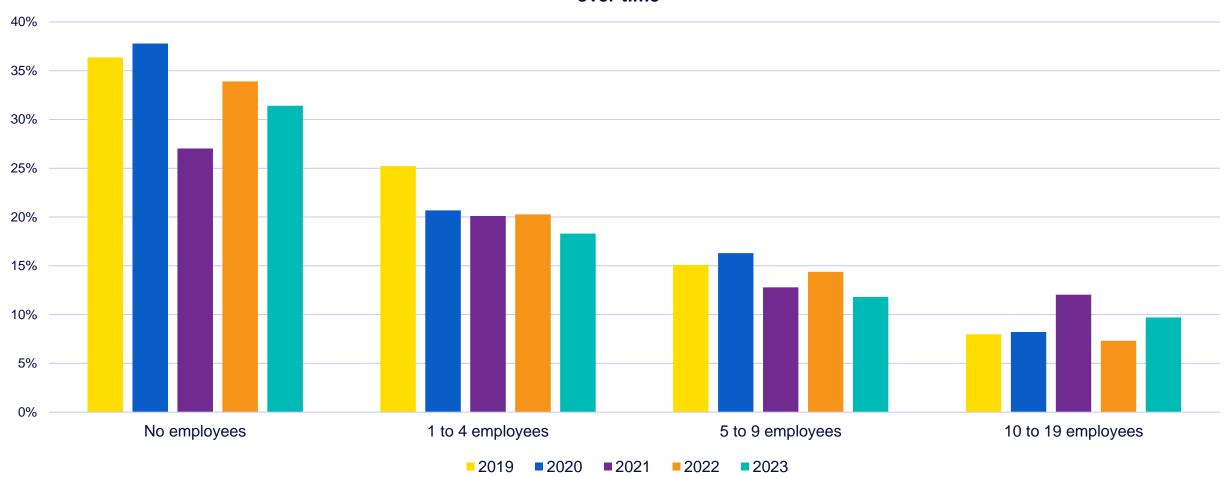

Respondents 60 and over remain significantly less likely to use social media

Businesses established for over 20 years are much less likely to use social media

Businesses with no employees are the least likely to use social media

NOT using social media for business purposes – by age of respondent and over time – by business size and over time

CYBERSECURITY

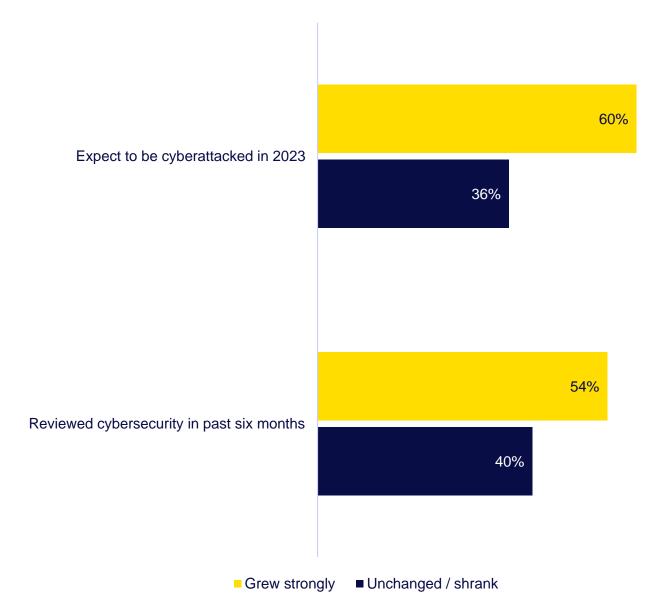

Cybersecurity

- With high-growth businesses more reliant on technology, it's not surprising they are significantly more likely to expect a cyberattack in 2024 than businesses that expect to remain unchanged or shrink in 2024.
- It's also not surprising that high-growth businesses are therefore significantly more likely to have reviewed their cybersecurity in the past six months
- Hong Kong and Vietnamese small businesses are the most likely to expect to be cyberattacked in 2024. They were also the most likely to experience lost time and/or money due to a cyber incident in 2023.
- Given the low digital uptake by many Australian and New Zealand businesses, it's not surprising that they are among the least likely to expect a cyberattack this year, and the least likely to have lost time and/or money due to a cyber incident in 2023.
- As Hong Kong and Vietnamese small businesses are the most likely to expect a cyberattack, it is encouraging to see an almost equal number of businesses from those markets stating they regularly review their cybersecurity practices. However, there is room to improve as almost every business should be reviewing their cybersecurity on a regular basis.
- Older respondents and micro businesses are the least likely to expect a cyberattack this year. They are also the least likely to have reviewed their cybersecurity in the past six months. Given their lower levels of digital uptake, this result is unsurprising. However, when compared to previous years older respondents and businesses have improved with more stating they reviewed their cybersecurity in the past six months.

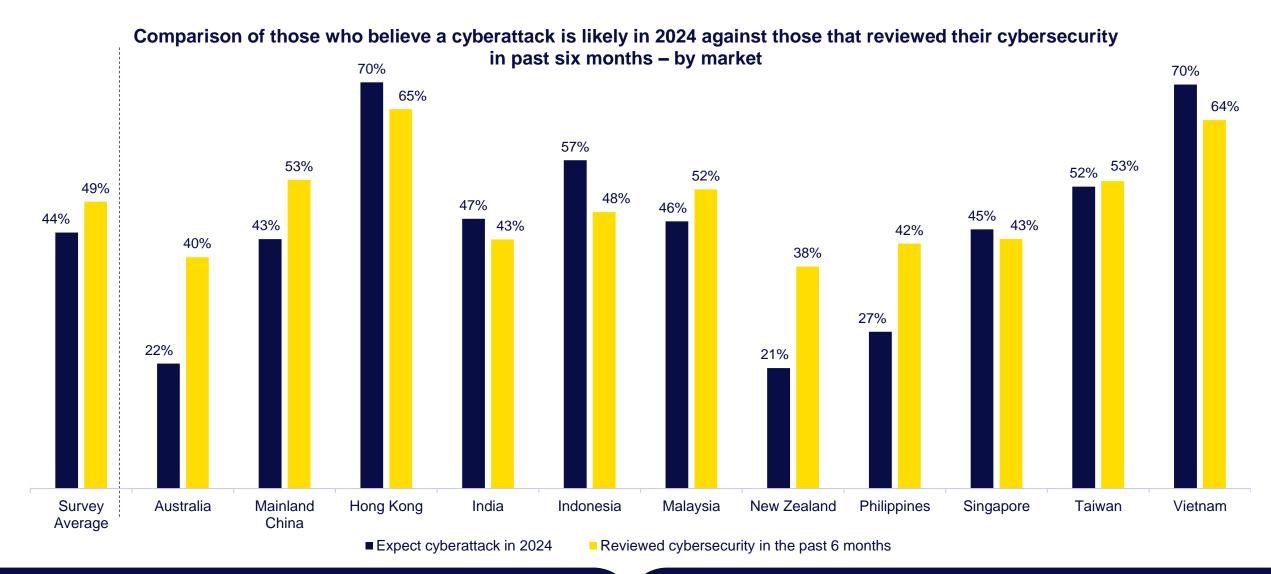

Cybersecurity concerns and whether there is a connection to highgrowth businesses

Reflecting that high-growth businesses are more reliant on technologies, the results show that they are more likely to expect to be cyberattacked and take action to protect themselves from such attacks

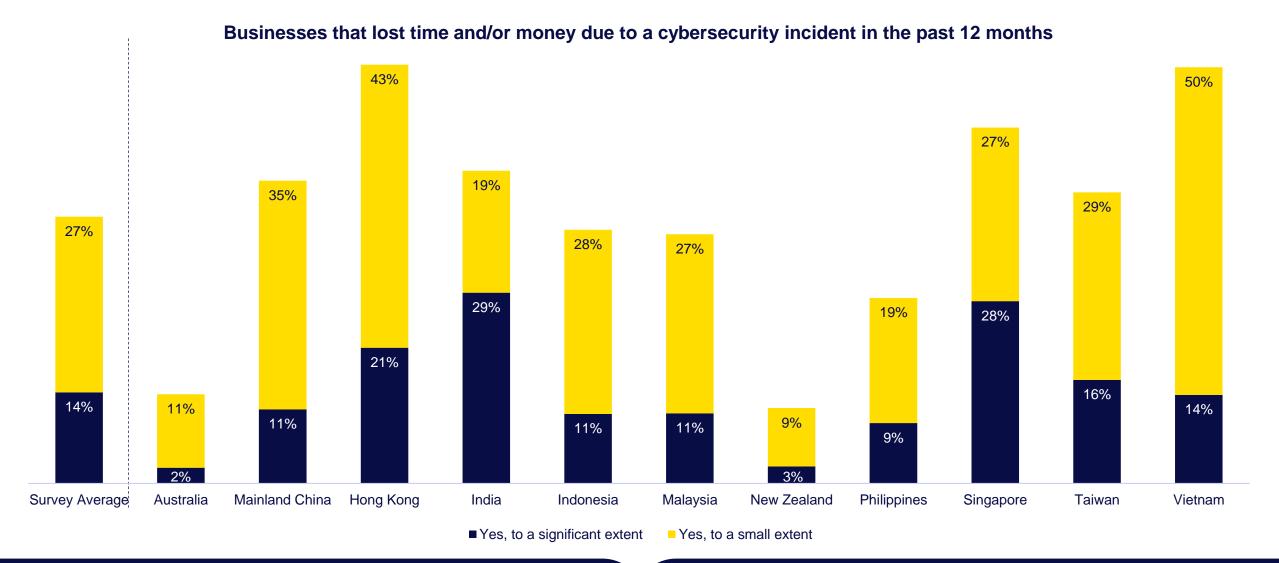

Slightly more businesses that were unchanged or shrank took steps to review their cybersecurity practices in 2023.

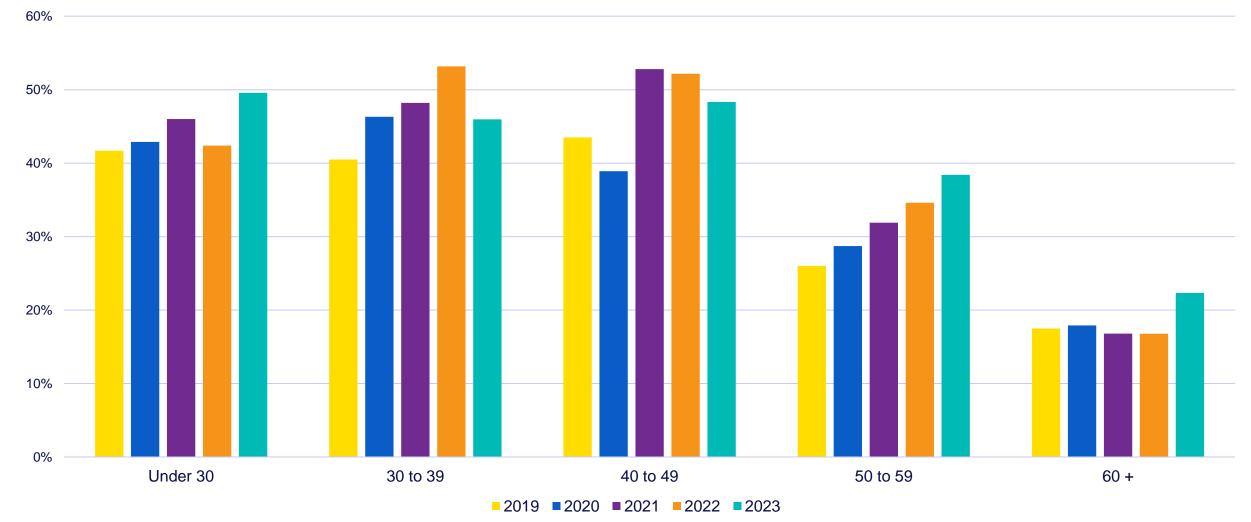

Prudent small businesses should be reviewing their cybersecurity on a regular basis, regardless of whether they expect to be cyberattacked

Respondents from India and Singapore were the most likely to report they suffered lost time and/or money from a cyber incident in 2023

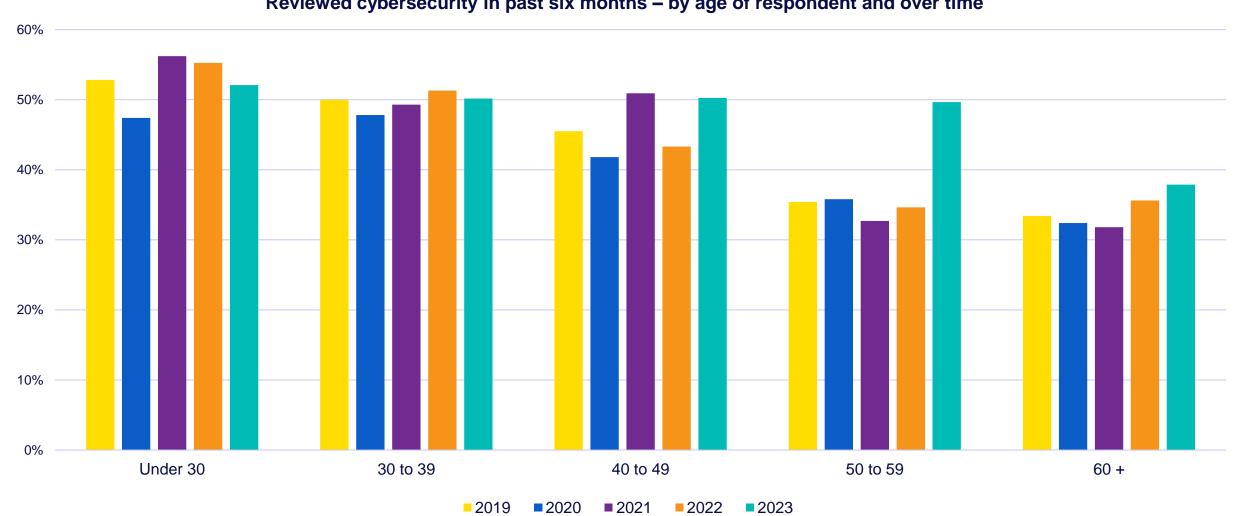

Older respondents are much less likely to expect to be cyberattacked

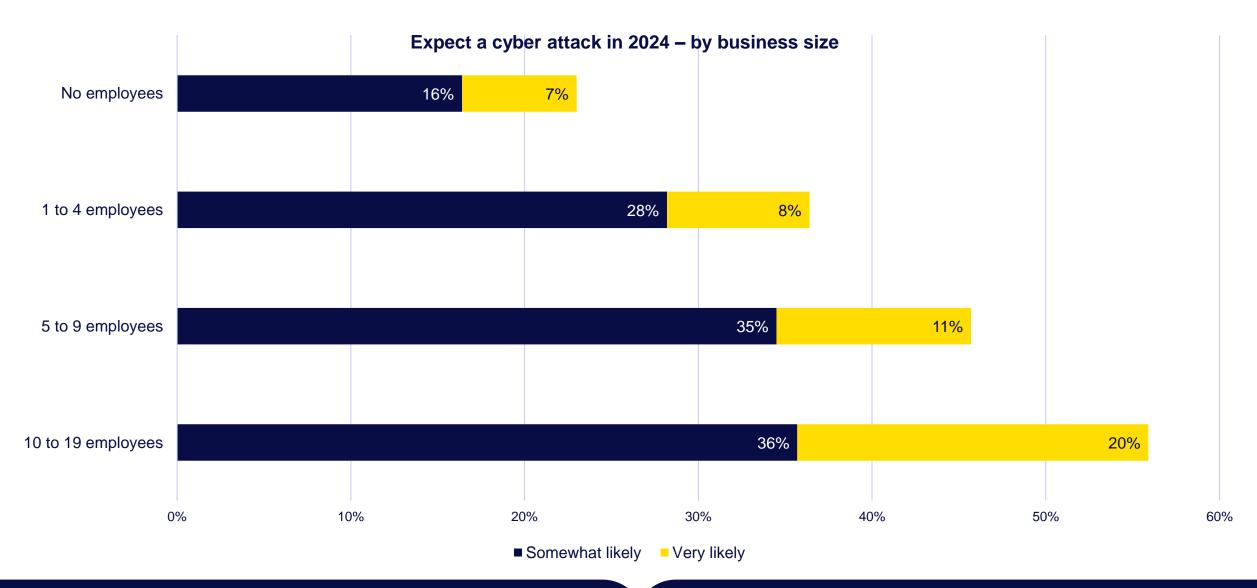

Expect a cyber attack in the next 12 months – by age of respondent and over time

Despite most older respondents not expecting to be cyberattacked, many still review their cybersecurity on a regular basis

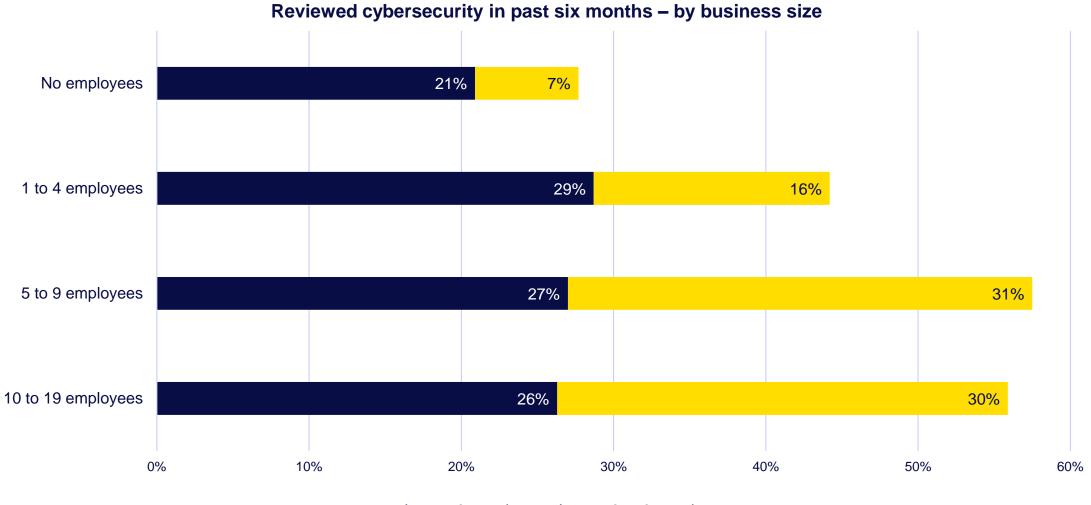

Reviewed cybersecurity in past six months – by age of respondent and over time

Businesses with more employees are more likely to expect to be cyberattacked

Despite most micro businesses not expecting to be cyberattacked, many still review their cybersecurity on a regular basis

In past 3 months
In past 3 to 6 months

Cybersecurity by industry

Top-five industries that expect to be cyberattacked in 2024

- 1. Public administration and safety 65%
- 2. Utilities -65%
- 3. Banking, finance or insurance 56%
- 4. Administrative and support services 55%
- 5. Healthcare and social assistance 52%

Top-five industries that reviewed their cybersecurity in the past six months

- 1. Banking, finance or insurance 68%
- 2. Administrative and support services 61%
- 3. Manufacturing 58%
- 4. Transport and warehousing 58%
- 5. Healthcare and social assistance 55%

Top-five industries that lost time and/or money due to a cybersecurity incident in the past 12 months

- Industries that lost time and/or money tend to be those that have large databases of personal/financial information.
- Businesses in these industries must take greater steps to ensure adequate safeguards are in place to protect their operations.

Utilities – 70%

Public administration and safety – 63%

Banking, finance or insurance – 57%

Health care and social assistance - 50%

Manufacturing - 49%

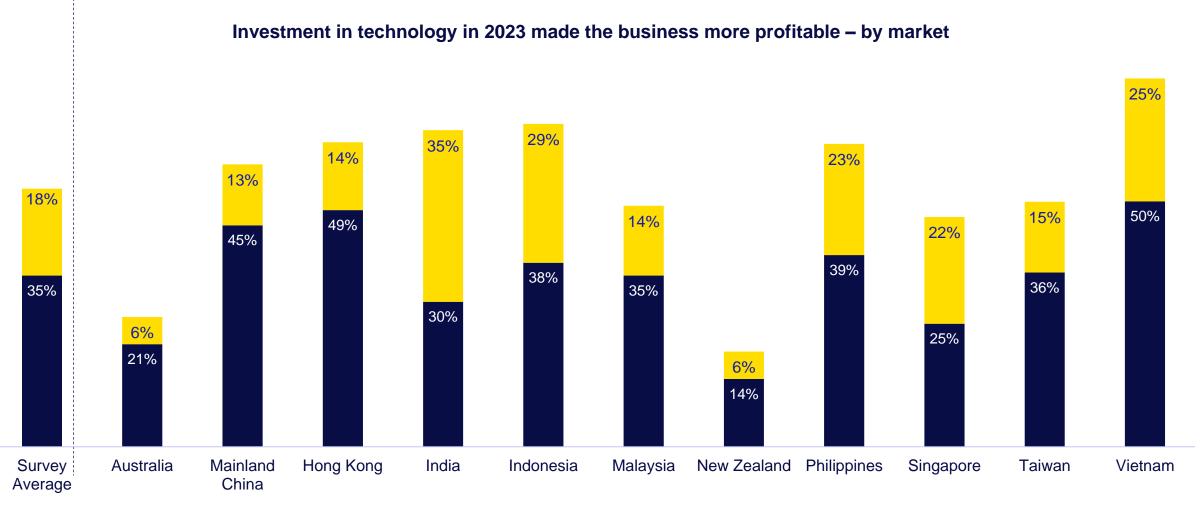

IMPACT OF TECHNOLOGY ON PROFITABILITY

Impact of technology on profitability in 2023

- Markets most likely to have high-growth small businesses were again the most likely to have small businesses that reported their investment in technology improved their profitability in 2023.
- Vietnamese small businesses were the most likely to report that their investment in technology last year resulted in improved profitability. India's small businesses were the most likely to report that such investments significantly improved their profitability.
- Australian and New Zealand small businesses were the least likely to say their investment in technology increased their profitability. Given that small businesses in those markets have fewer employees and their owners are typically older, this result is not surprising.
- As with selling online and using social media, older respondents, older businesses and micro businesses continue to be significantly less likely to be investing in technology that improves profitability. This possibly reflects a lack of knowledge of what technology options exists for their business and how best to apply it in their business.
- Technology vendors should work harder at explaining their products or services to older small business owners.
- Governments have a role to play in providing more independent information on technology options available to small businesses. Further, governments can help provide training for older businesses to improve their technology skills and/or improve access to technology advice.

Vietnam's small businesses lead the way in investing in technology that quickly improved their profitability, with New Zealand a long way behind

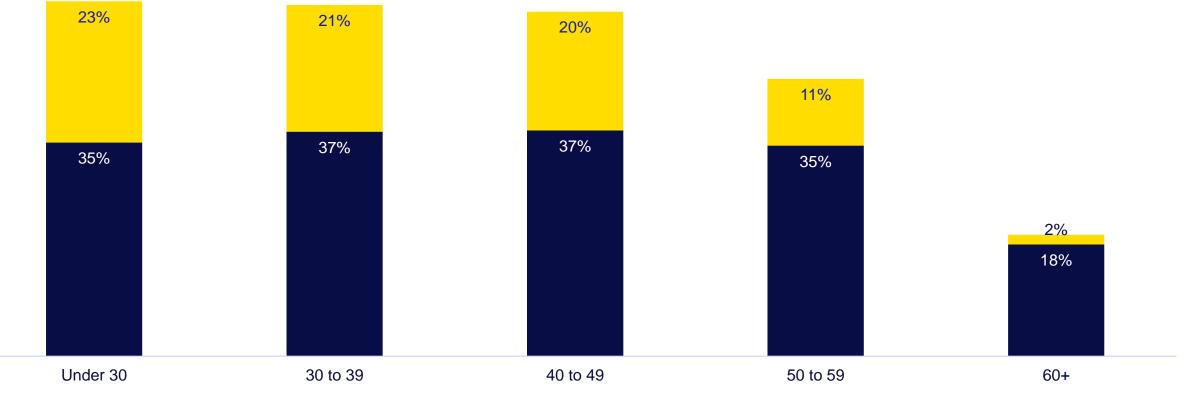

Somewhat more profitable

Significantly more profitable

Small businesses owned or managed by people under 50 are significantly more likely to be purchasing technology that rapidly improves their profitability

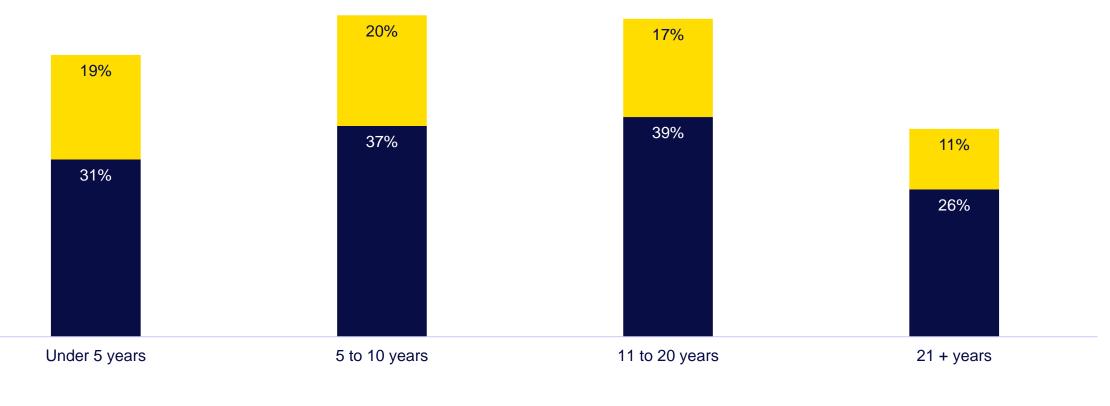

Investment in technology in 2023 made the business more profitable – by age of respondent

SMALL BUSINESS AND JOBS CREATION IN 2023

Small business impact on employment in 2023

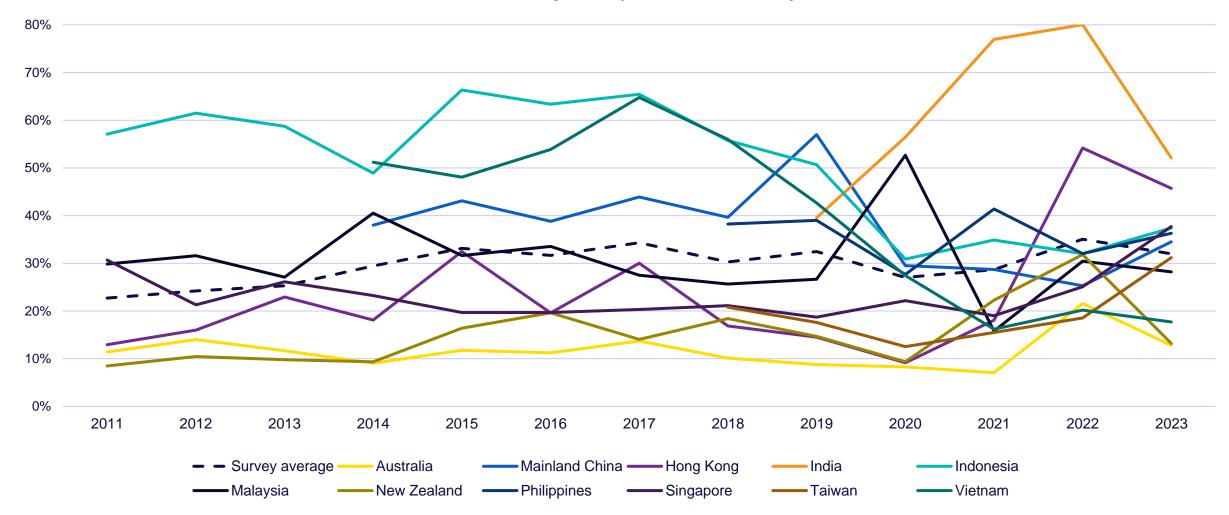

- Reflecting the large number of Indian small businesses that grew strongly in 2023, that market's small businesses were the
 most likely to increase their employee numbers in 2023, repeating the outcome from the 2022/23 survey. However, the
 number of Indian businesses that added to their headcount last year was well down from 2022.
- In all markets, small businesses were more likely to add to their headcount last year than reduce it.
- Interestingly, despite strong growth numbers, Vietnamese small businesses were the third least likely to add to their headcount last year. This implies that many Vietnamese small businesses are achieving growth through greater productivity and efficiency – i.e., they are doing more with similar resources. This is reflected in their large investment in technology.
- Singaporean and Taiwanese small businesses were more likely to add to their headcount than expected, which is similar to the result on business growth.
- As with business growth and technology uptake, older respondents and older businesses continue to be less likely to be creating jobs.

India's small businesses are large creators of new jobs

Small businesses that created new jobs in 2023 compared with reduced jobs – by market

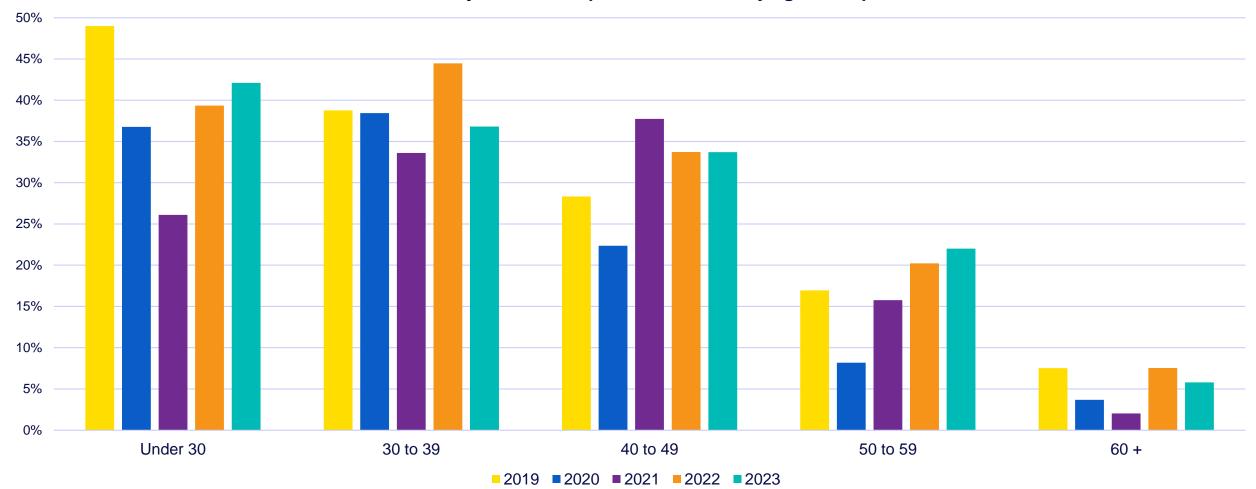

Most markets saw an increase in the number of small businesses creating new jobs in 2023, while India experienced the sharpest decline in increasing new jobs

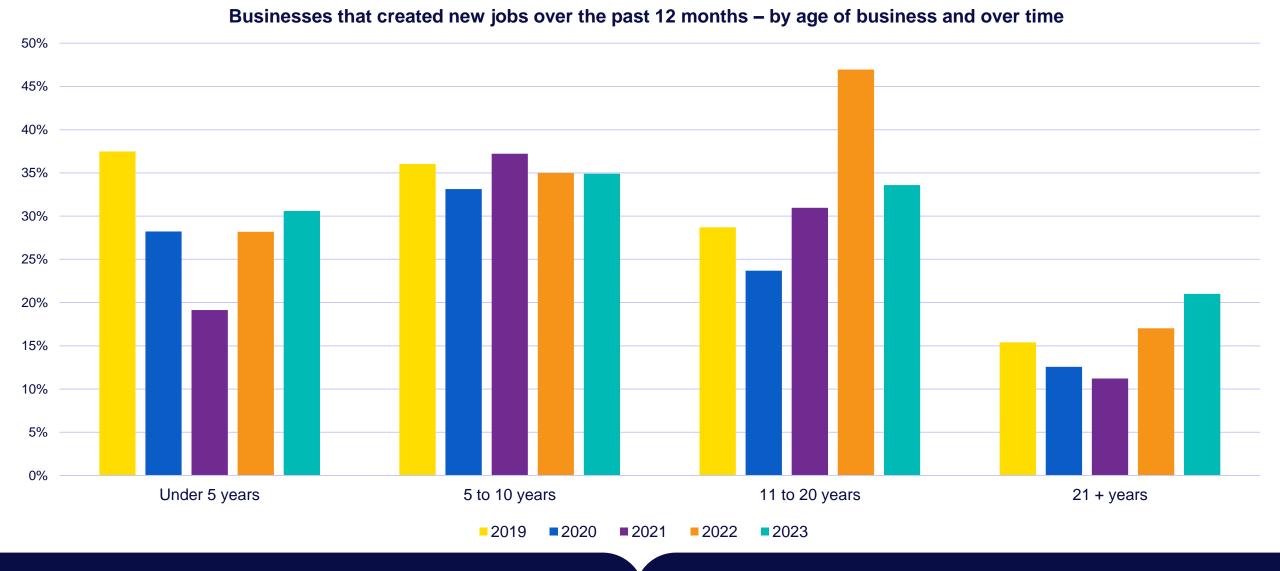

Small businesses that created new jobs in past 12 months – by market and over time

Small businesses owned or managed by someone under 50 are noticeably more likely to increase employee numbers in 2023 than their older counterparts

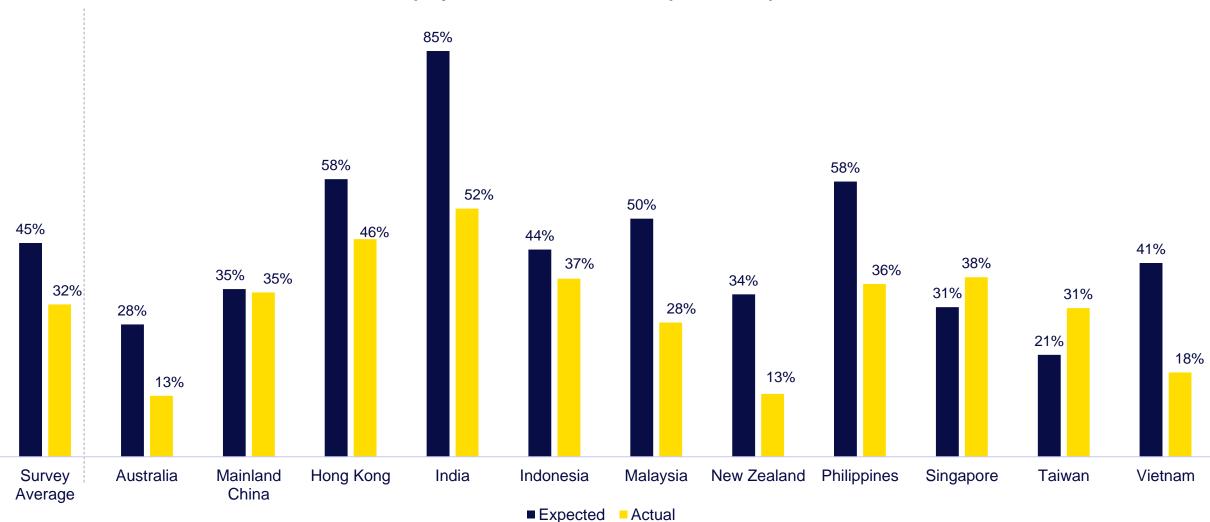

Businesses that created new jobs over the past 12 months – by age of respondent and over time

Younger businesses are more likely to increase employee numbers in 2023 than their older competitors

Asia-Pacific Small Business Survey 2023-24

Singaporean and Taiwanese small businesses increased their employee numbers more than expected

Actual increase in employee numbers in 2023 compared to expected increase

Top-five industries that increased employee numbers in 2023

 Most of these industries reported strong growth in 2023 which is commensurate with the increased need for employees

Information, media and telecommunications – 42%

Banking, finance or insurance – 40%

Accommodation and food services – 38%

Health care and social assistance – 38%

Utilities – 37 %

BUSINESS SOLVENCY

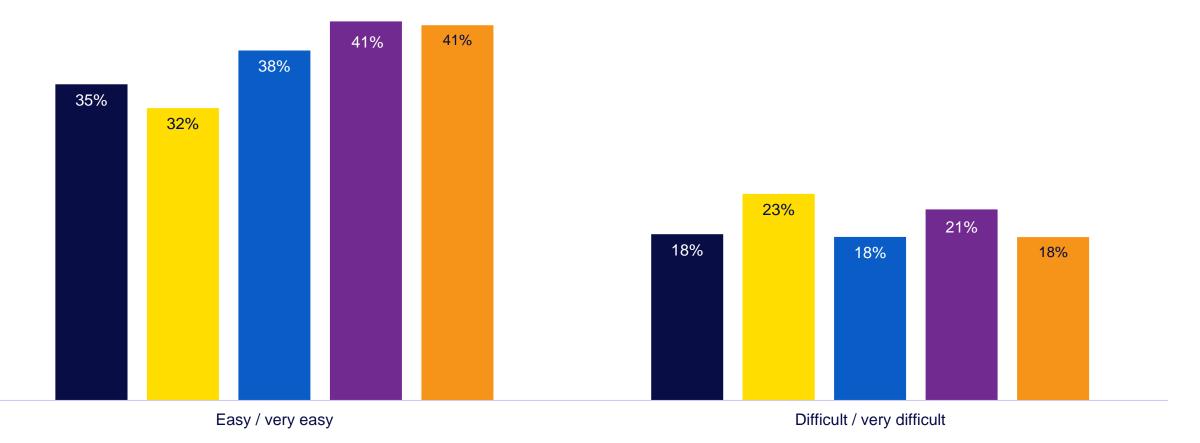

Small business' ability to pay their debts

- There has been no material increase in the percentage of small businesses that found paying debts difficult during the pandemic (2020, 2021 and 2022) compared with pre-pandemic (2019) and post-pandemic (2023). This most likely reflects the significant cash flow assistance many governments offered small business to help them through the pandemic. Loan moratoriums and easier credit terms from suppliers also eased the debt stress on many small businesses.
- Small businesses in Hong Kong found it easiest to pay their debts 2023.
- Filipino small businesses found it the most difficult. This could be due to increasing interest rates, supply chain issues and large outstanding liabilities.
- Small businesses with more employees were significantly more likely to find it easy to pay their debts in 2023 than sole traders.

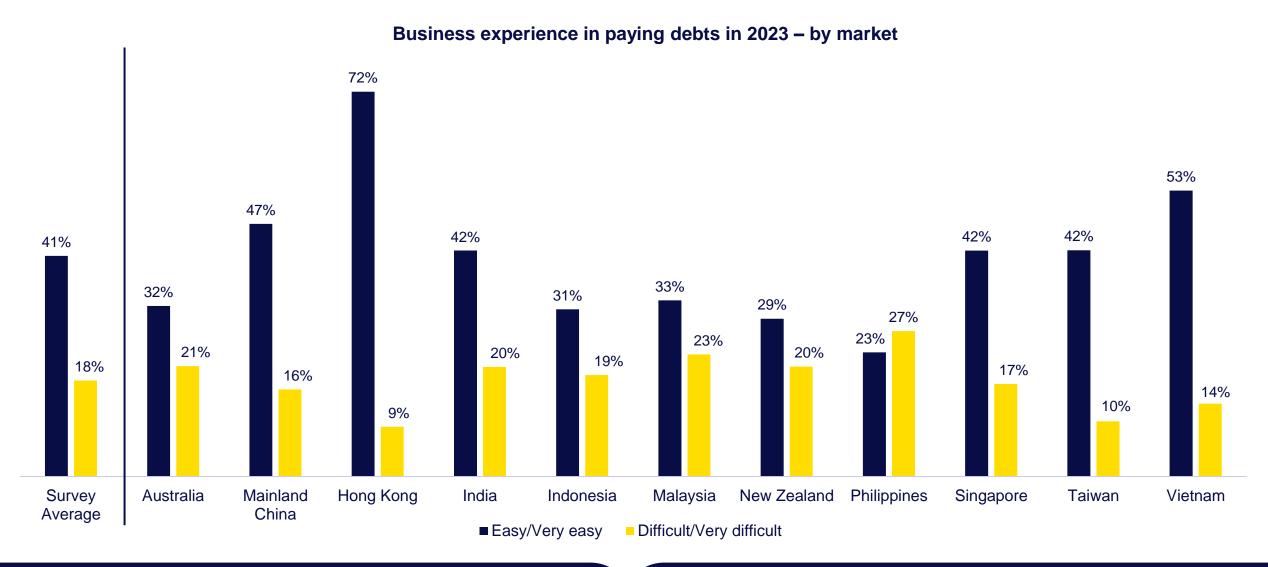

Despite rising interest rates and cost increases, many businesses did not seem to have a major issue in repaying their debts in 2023

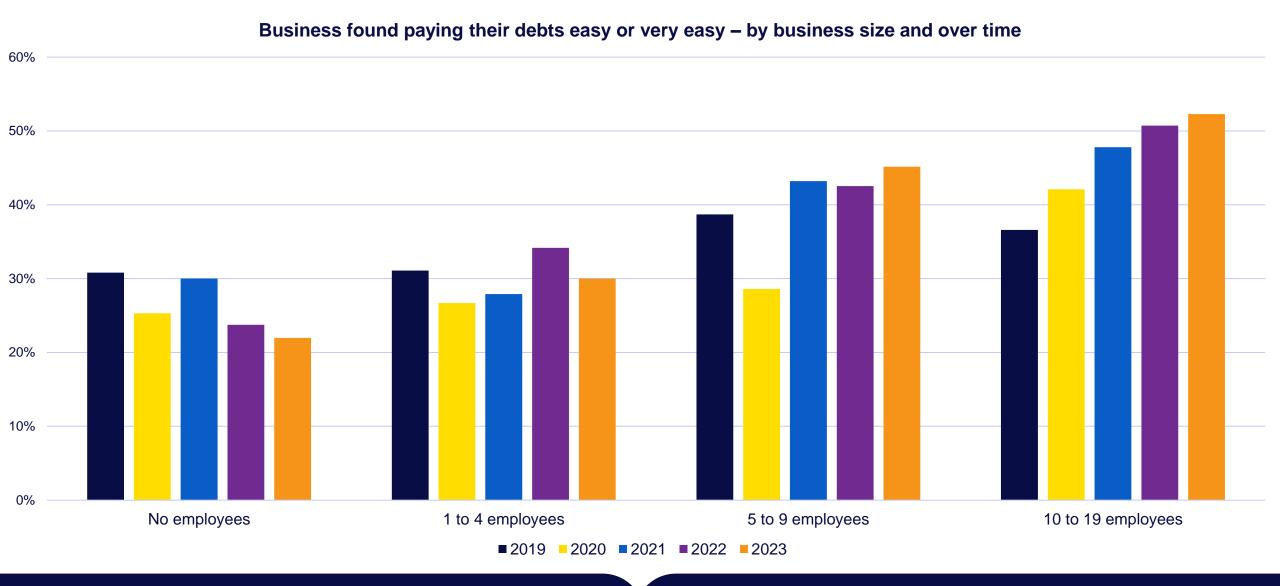

■ 2019 **■** 2020 **■** 2021 **■** 2022 **■** 2023

Except for the Philippines, small businesses in all the markets were more likely to find it easy to pay their debts in 2023 than difficult

Small businesses with more employees were significantly more likely to find it easy to pay their debts in 2023 than sole traders

Top-five industries that found paying their debts was easy or very easy in 2023

- 1. Public administration and safety 53%
- 2. Banking, finance or insurance 52%
- 3. Manufacturing 51%
- 4. Information, media and telecommunications 49%
- 5. Property and construction 43%

- 3. Property and construction 22%
- 4. Transport and warehousing 22%
- 5. Agriculture, forestry and fishing 22%

ISSUES THAT HAD THE LARGEST POSITIVE AND NEGATIVE INFLUENCES ON SMALL BUSINESS IN 2023

Issues that had the largest positive and negative influence of small businesses in 2023

- Customer loyalty was the factor that had the most positive impact on small businesses last year, regardless whether it was in a high growth phase or not.
- High growth businesses were much more likely than businesses that did not grow or shrank to nominate the following as having a major positive influence on their business in 2023:
 - improved business strategy
 - technology
 - improved business management.
- High growth businesses were also much more likely to find that improving customer satisfaction had a major positive influence on their business in 2023.
- Not surprisingly, the most popular negative impact on businesses in 2023 was increasing costs. Indonesia was the only
 market where increasing costs was not the top challenge, instead citing increasing competition as their main barrier to
 growth.
- New Zealand, Australian and Malaysian small businesses were the most likely to state that increasing costs had a major negative impact on their business last year.
- With inflation slowing in most of the markets surveyed, it will be interesting to see how much increasing costs is a barrier to business growth in 2024.

Most popular positive influences on business in 2023 – by market

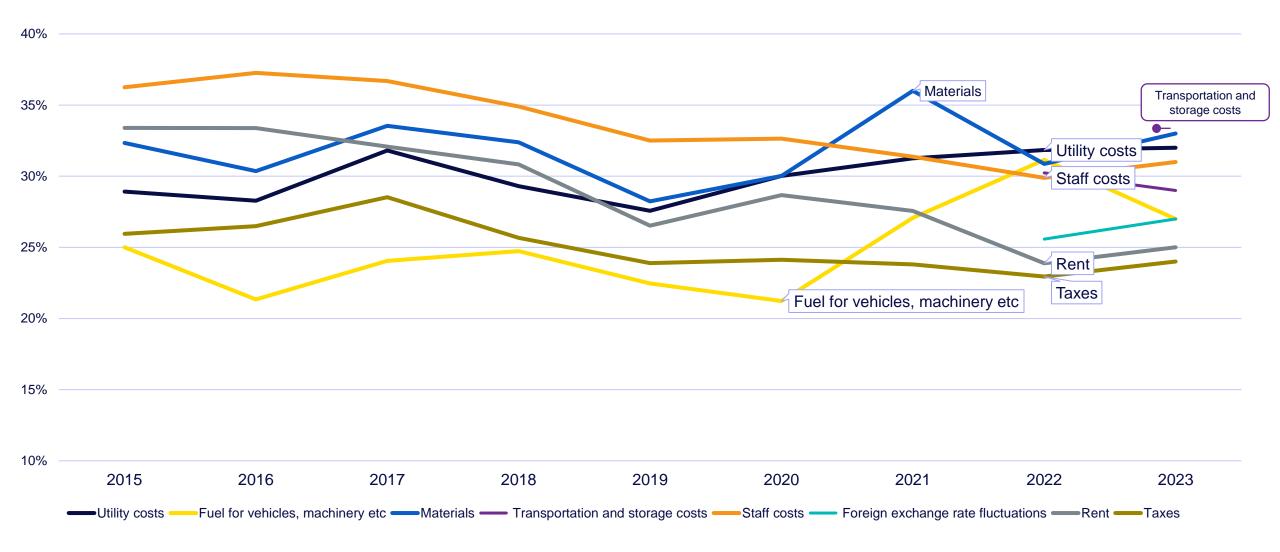

| | Most popular | Second most popular | Third most popular |
|--|--------------------------------------|---|---|
| High-growth businesses | Customer loyalty & good staff (38%) | Improved customer satisfaction (37%) | Improved business strategy (36%) |
| Businesses that were unchanged or shrank | Customer loyalty (31%) | Cost control (23%) | Improved customer satisfaction (20%) |
| Australia | Customer loyalty (47%) | Good staff (25%) | Cost control (20%) |
| Mainland China | Improved business management (28%) | Introduced a new product or services (27%) | Entering new markets (27%) |
| Hong Kong | Entering new markets (26%) | Good staff (26%) | Positive overall economic environment (24%) |

| Vietnam | Increasing costs (40%) | Increasing competition (39%) | Poor overall economic environment (38%) |

Transportation and storage costs became an increasing concern for small businesses across the region

Cost increases that caused the business the most detriment - over time

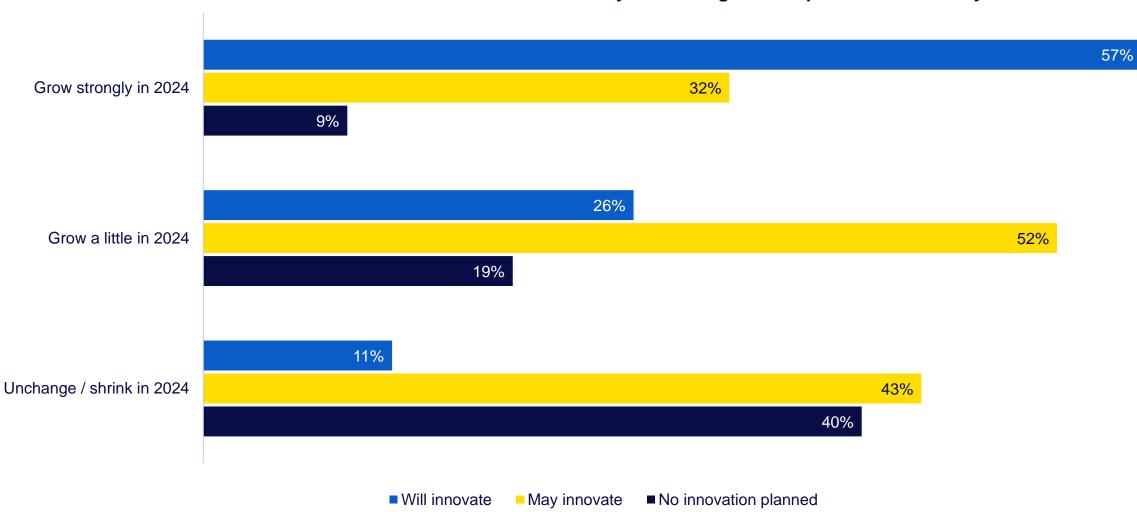

Small business and innovation

The impact of innovation on small business

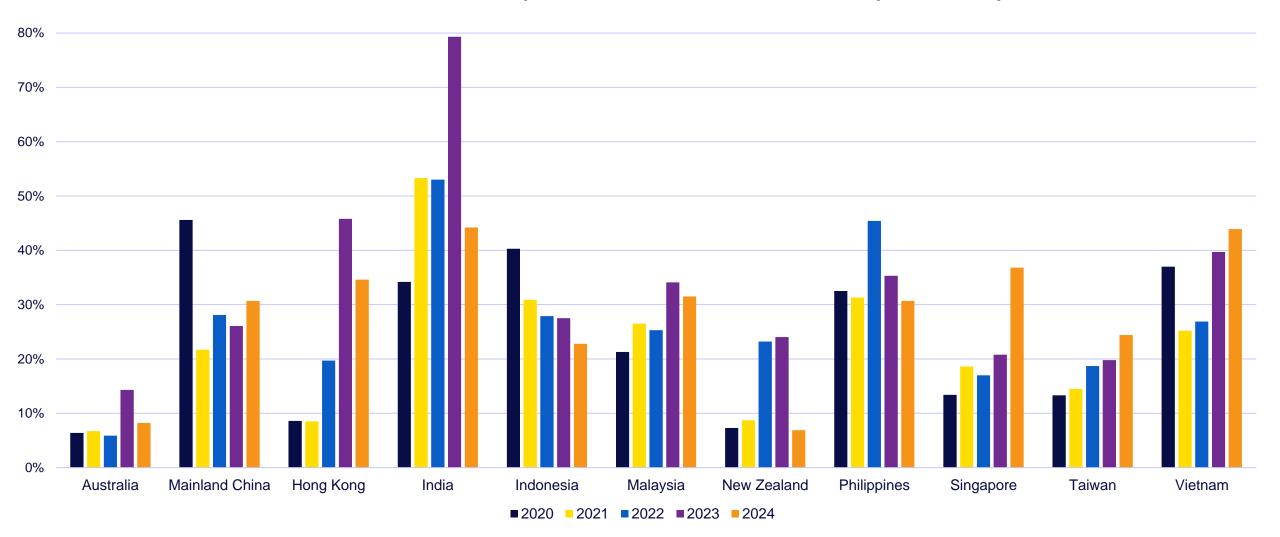

- Small businesses that will introduce a product, service or process that is new to their market or the world in 2023 are significantly more likely to expect to grow in 2024. This is consistent with the results from previous surveys.
- 2024 seems to be a more muted year for a majority of markets in the region when it comes to innovation. Only small businesses from Singapore, Taiwan, Vietnam and Mainland China expect to increase innovation in 2024 when compared to 2023.
- Significantly more Singapore, Taiwan and Vietnam small businesses expect to innovate in 2024 than in 2023 or in 2022. This could be due to expected improvements in the business environment and government policies to encourage innovation. Innovation could also be driven by the need for businesses to manage cost and improve efficiency of their operations.
- New Zealand and Australian small businesses are the least likely to innovate in 2024
- Younger businesses, younger respondents and larger small businesses are more likely to say they will innovate this year. This is also consistent with the results from previous surveys.

High growth small businesses are significantly more likely to say they will innovate this year

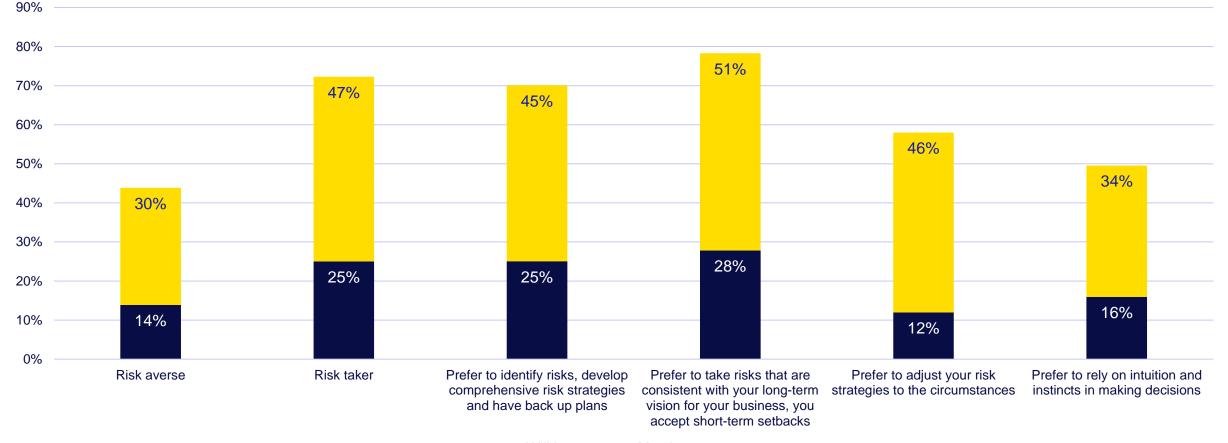

Only Mainland Chinese, Singaporean, Taiwanese and Vietnamese small businesses report an increase in the number of businesses that will innovate this year compared to last year

Small businesses that state they will innovate in the next 12 months - by market and year

Not surprisingly, risk averse business owners are the least likely to expect to innovate in 2024, while those preferring to take risks consistent with their long-term vision are the most likely to innovate

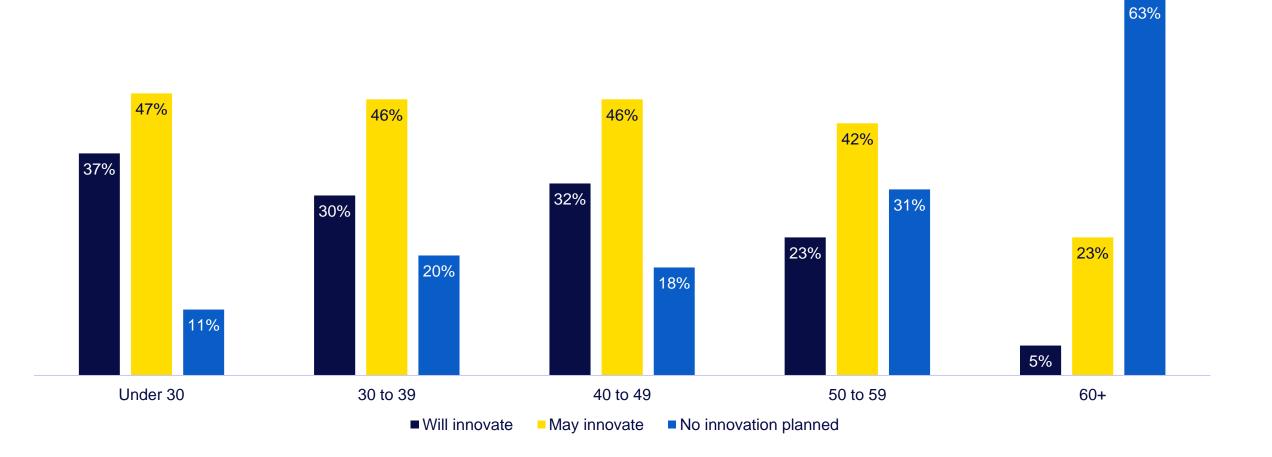

Small businesses that will/may innovate in the next 12 months by attitude of business owner to risk

Will innovate May innovate

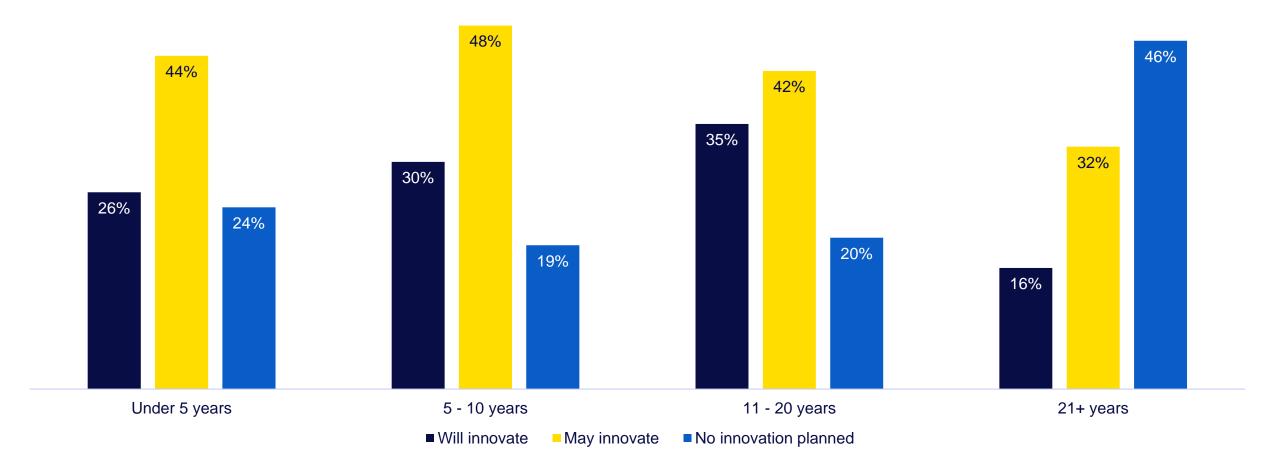

Small businesses owned or managed by people under 50 are more likely to say they will innovate in 2024, while those 60 and over are highly unlikely to innovate

Small businesses innovation intentions in 2024 - by age of respondent

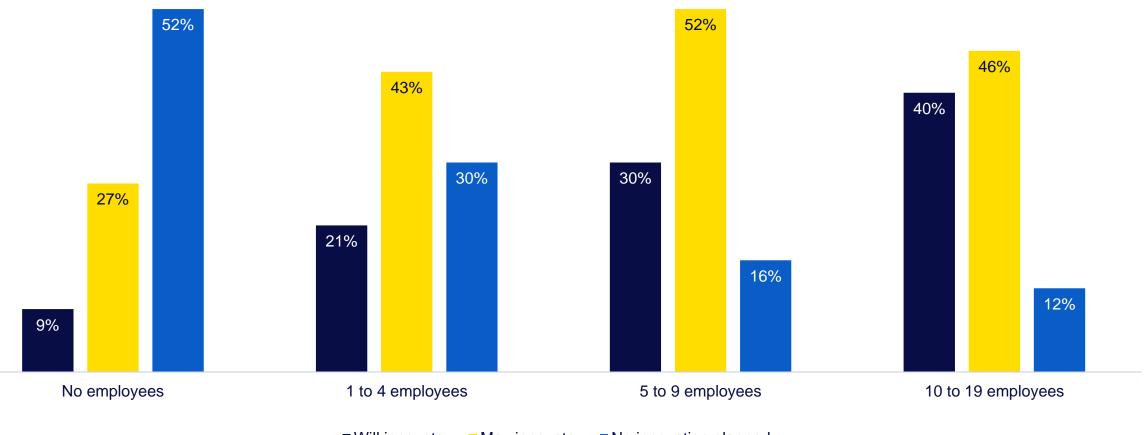

Businesses established five to 20 years are the most likely to innovate this year, while those operating over 20 years are the least likely

Small business innovation intentions in 2024 - by age of business

Small businesses with more employees are much more likely to innovate this year

Small business innovation intentions in 2024 - by number of employees

Will innovate May innovate No innovation planned

Top-five industries that will innovate in 2024

It is interesting to note that the utilities sector is one of the most likely to state they will innovate in 2024. This could be a response to the transition to renewable energy sources to meet customer demand and government targets.

Small business expectations for 2024

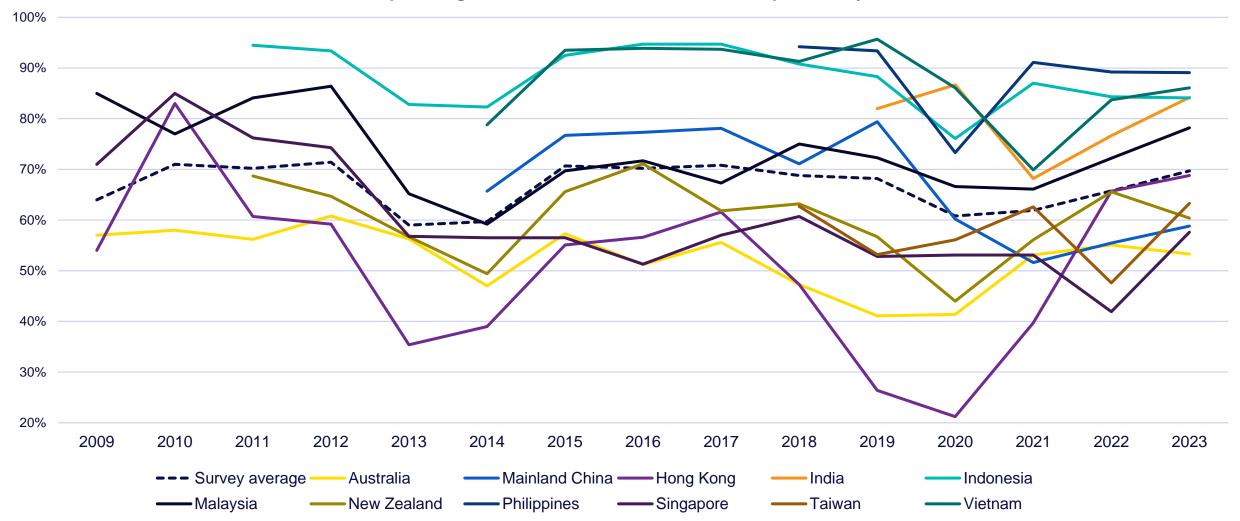

SMALL BUSINESS GROWTH EXPECTATIONS FOR 2024

Small business growth expectations for 2024

- In all markets, the percentage of small businesses that expect to grow this year is higher than the percentage that reported growing in 2023.
- The results are however mixed when comparing growth expectations for 2024 to growth expectations for 2023. The survey
 results show a large increase in the number of small business that expect to grow this year in Singapore, India and Taiwan.
 While other markets expect a decrease, led by New Zealand and Australia.
- Filipino small businesses are the most likely to forecast they will grow this year, however Indian small businesses are the most likely to expect to grow strongly.
- Consistent with reported growth for 2023, younger businesses, younger respondents and larger small businesses are more likely to expect to grow in 2024.

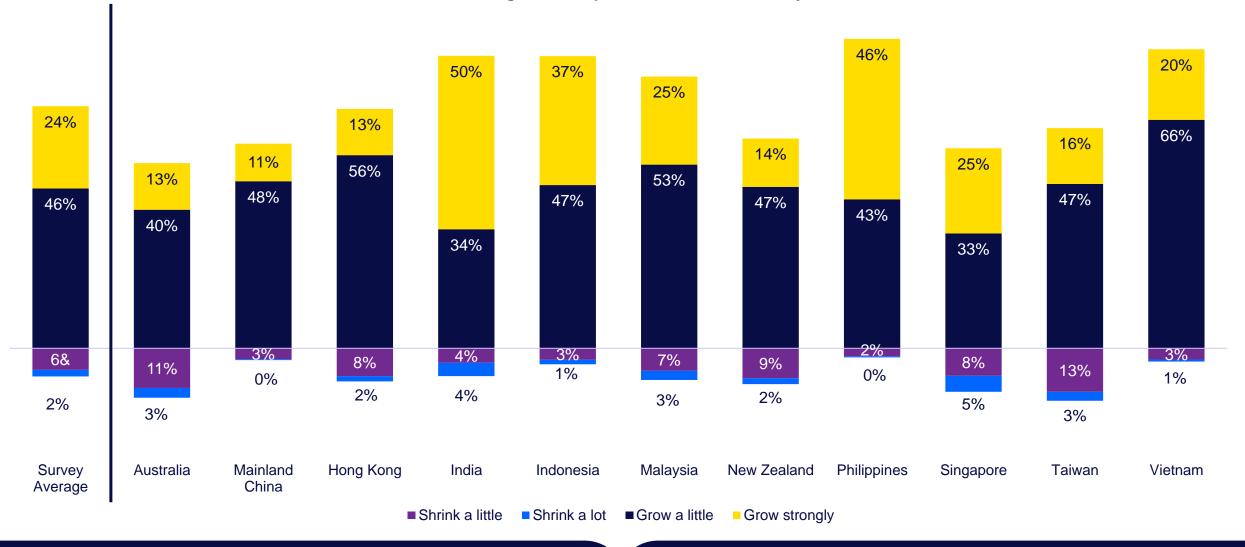

The survey shows good improvement in the percentage of small businesses that expect to grow from India, Malaysia, Taiwan and Singapore

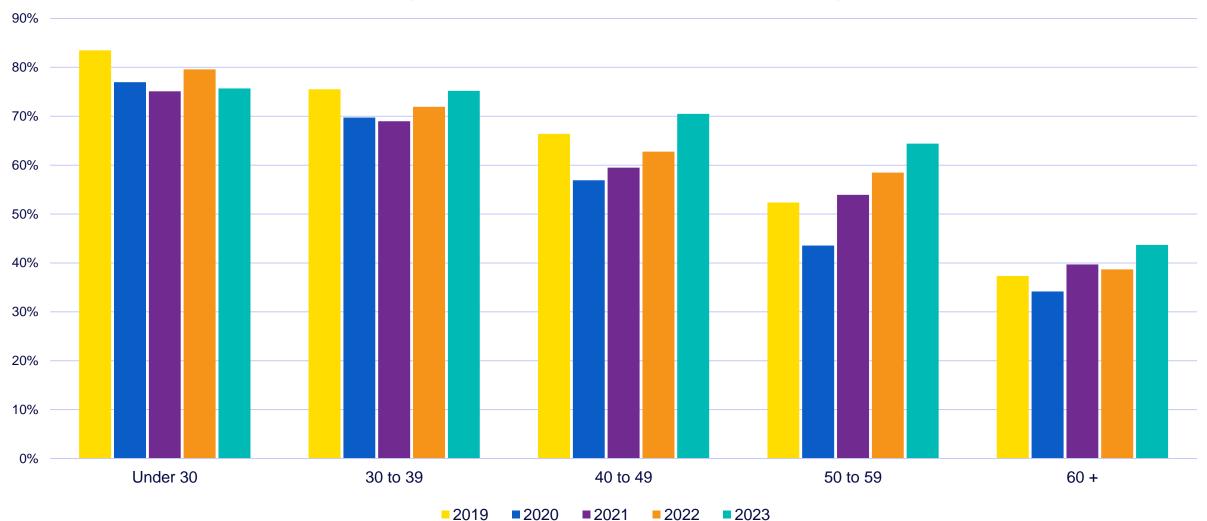

Small businesses that expect to grow in the next 12 months – a comparison by market and over time

EXPECTED GROWTH IN EXPORT REVENUE

Small business and exporting

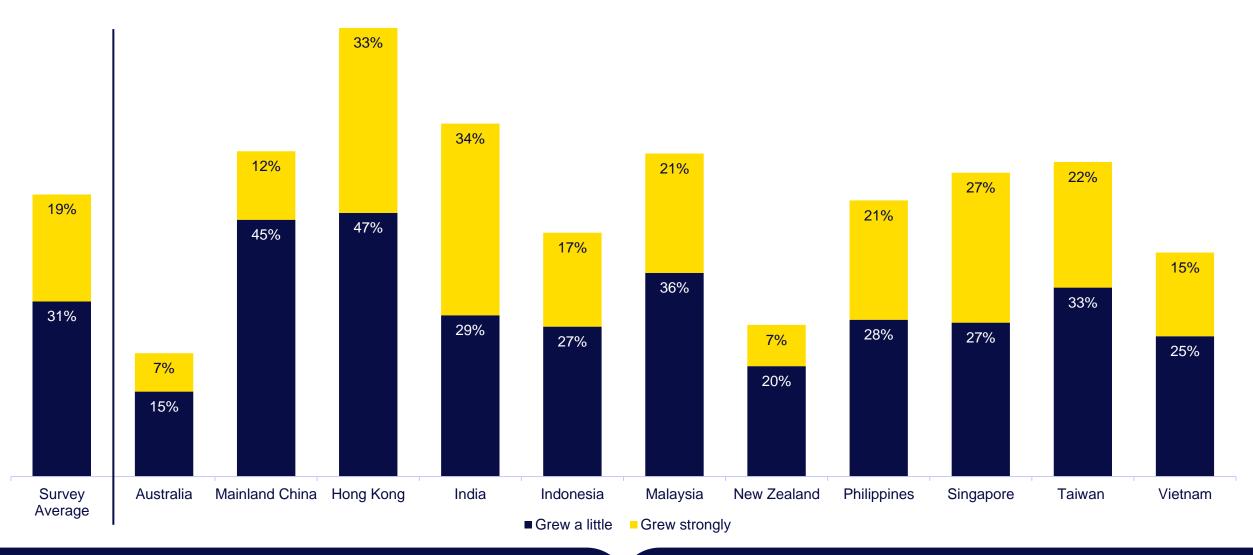

- The results show a strong correlation between businesses that expect to grow strongly in 2024 and those that expect their export sales to grow strongly.
- Many businesses that grew strongly in 2023 stated that entering new markets last year was one of the most positive influences on their business.
- Consistent with Hong Kong businesses being one of the most optimistic markets for 2024, they are ranked first in expecting their revenue from overseas sales to grow.
- Australia, New Zealand and Vietnam have the highest percentage of respondents not expecting to export this year.
- Younger respondents, younger businesses and larger small businesses are significantly more likely to expect to increase their export revenue this year.

High-growth small businesses are significantly more likely to expect strong growth in overseas sales in 2024

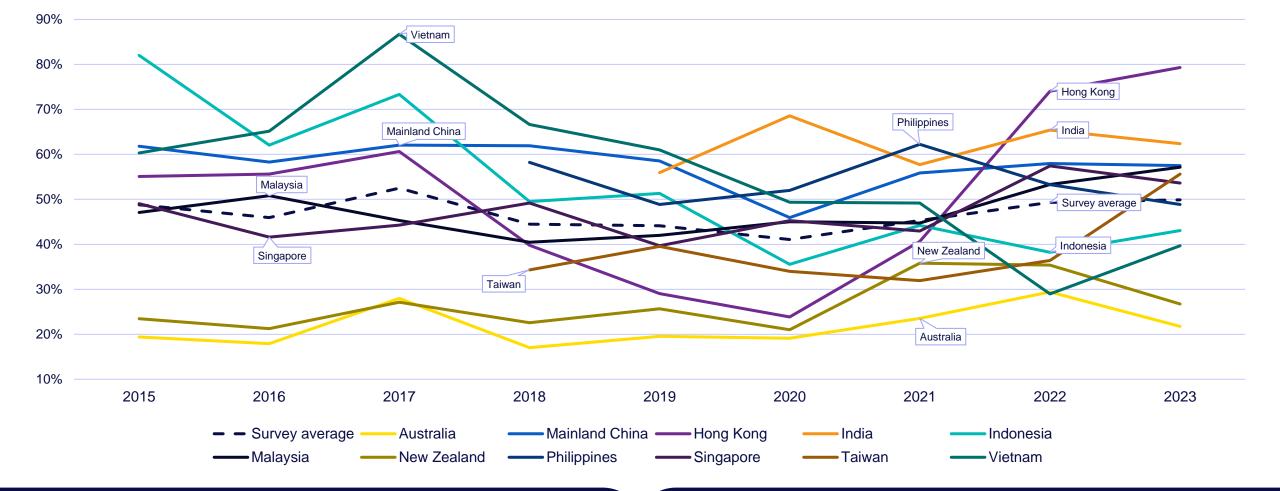

Hong Kong and Indian small businesses are more likely to expect their overseas sales to grow this year

Small businesses expecting revenue from overseas sales will grow in 2024 - by market

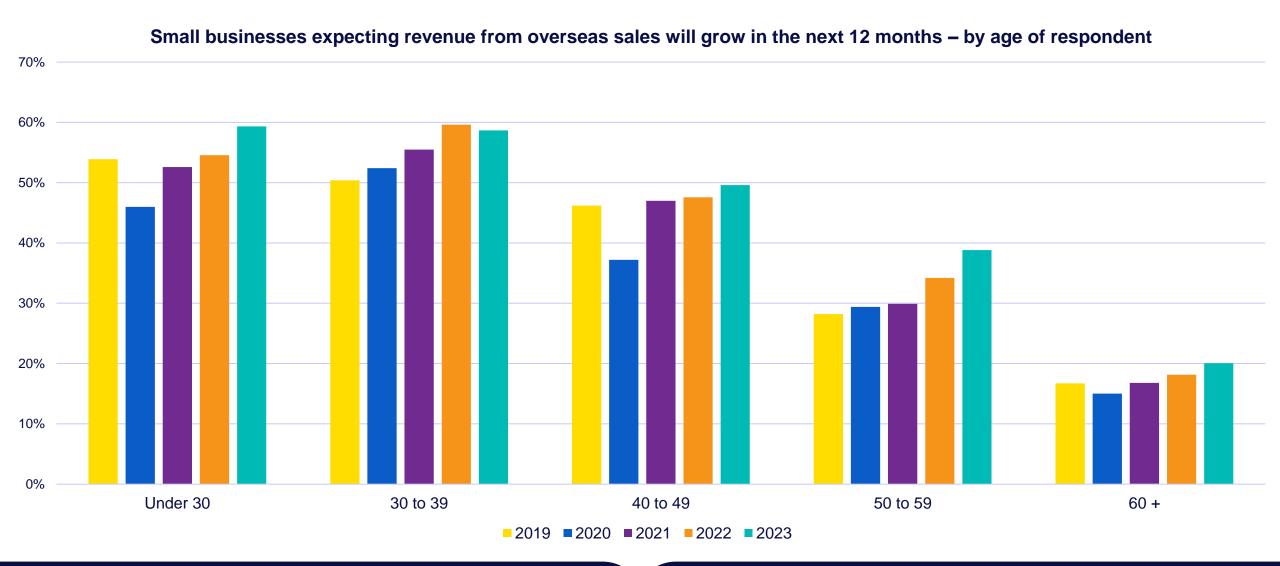

Hong Kong small businesses are the most likely to expect to sell overseas this year, continuing last survey's trend.

Small businesses that forecast their overseas sales will grow in the next 12 months - over time and by market

Small businesses owned or managed by younger respondents are significantly more likely to be involved in exporting

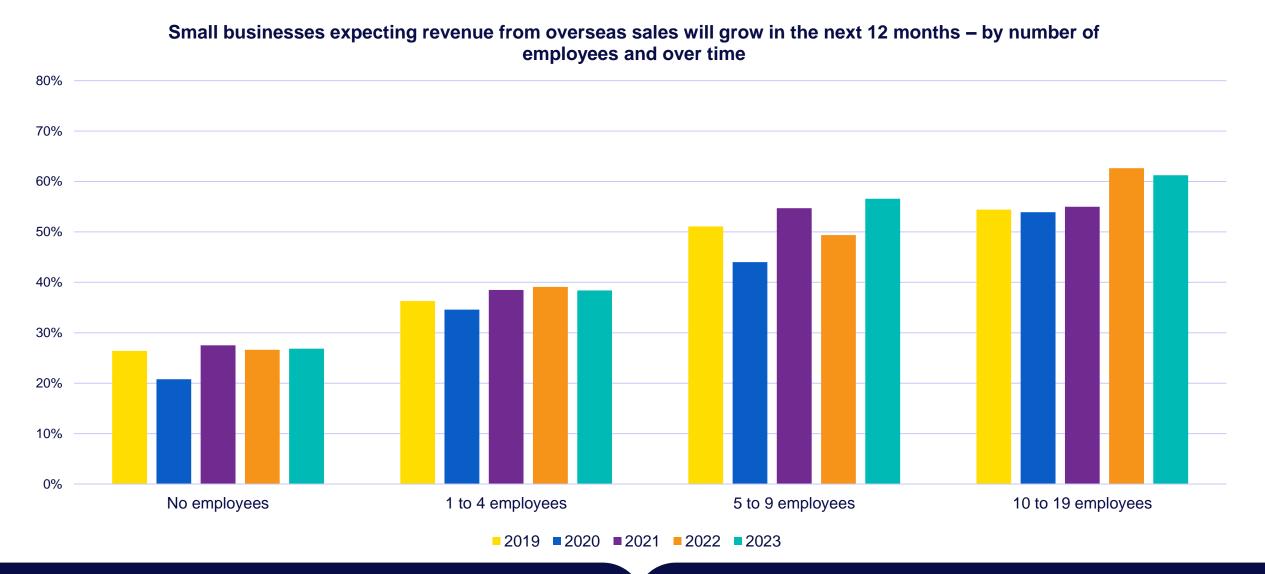

Younger businesses have a stronger focus on exporting

Small businesses expecting revenue from overseas sales will grow in the next 12 months – by age of business

Small businesses with more employees are significantly more likely to be focused on exporting

SMALL BUSINESS SOLVENCY EXPECTATIONS FOR 2024

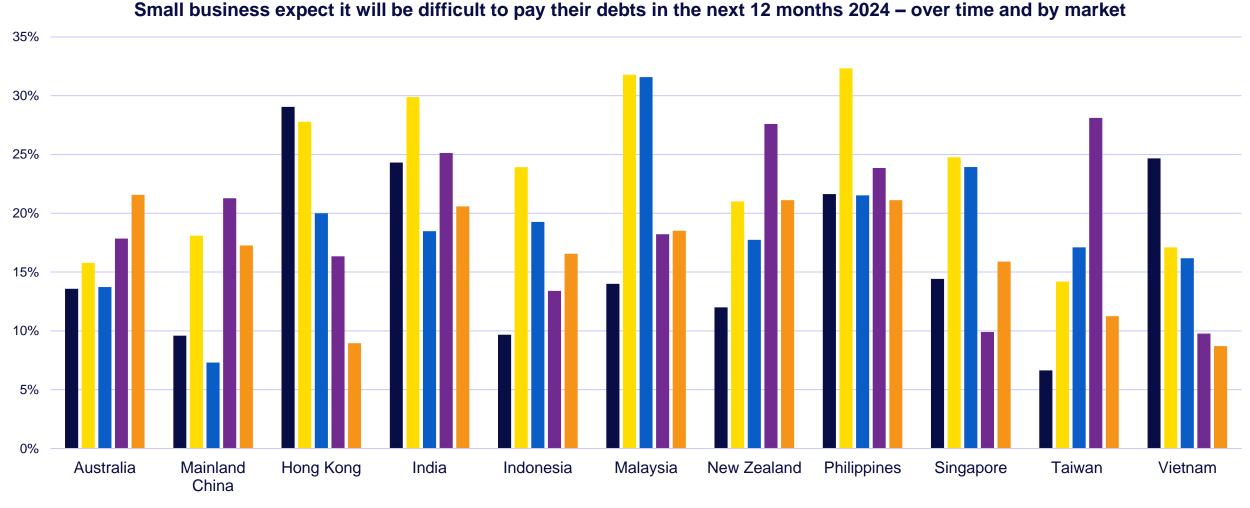

Small business paying their debts in 2024

- Overall, small businesses are more likely to expect it will be easy to pay their debts in 2024 than difficult. This is especially so for small businesses from Mainland China, Hong Kong and Vietnam.
- Solvency challenges are most likely to hit businesses in Australia, New Zealand and the Philippines this year.
- Newly created businesses are slightly less likely to believe that paying their debts will be easy this year.
- Businesses with under five employees are also less likely to believe that paying their debts will be easy than larger small businesses.

Solvency challenges are most likely to hit businesses in Australia, New Zealand and the Philippines this year

Australia, Indonesia and Singapore expect an increase in small businesses facing solvency challenges this year

Access to finance

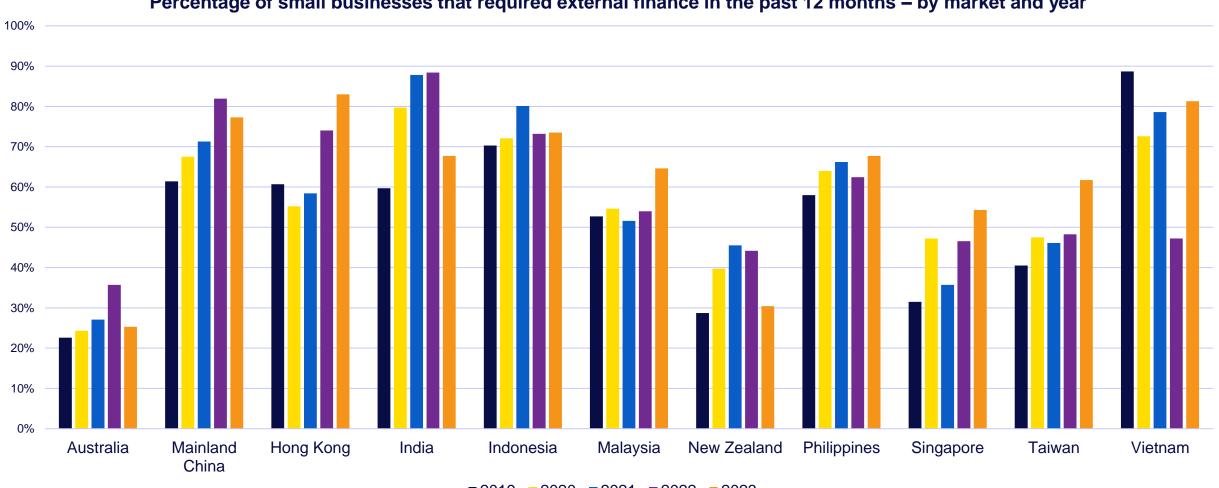

REQUIRED EXTERNAL FINANCE IN 2023

Small businesses requiring finance in 2023

- Small businesses from higher growth markets were more likely to require external finance last year than small businesses from lower growth markets
- Hong Kong's small businesses overtook India as the most likely to have required external finance. This reflects the strong
 growth in that market
- Vietnam's small businesses were significantly more likely to require finance last year compared to the previous year. This
 is consistent with the strong capital needs of that market given the relatively small percentage that added to their employee
 headcount in 2023.
- Younger respondents, younger businesses and larger small businesses are much more likely to have required external finance in 2023. Given such businesses are more likely to be growing, using technology, innovating and entering new markets, this strong demand for external finance is no surprise.

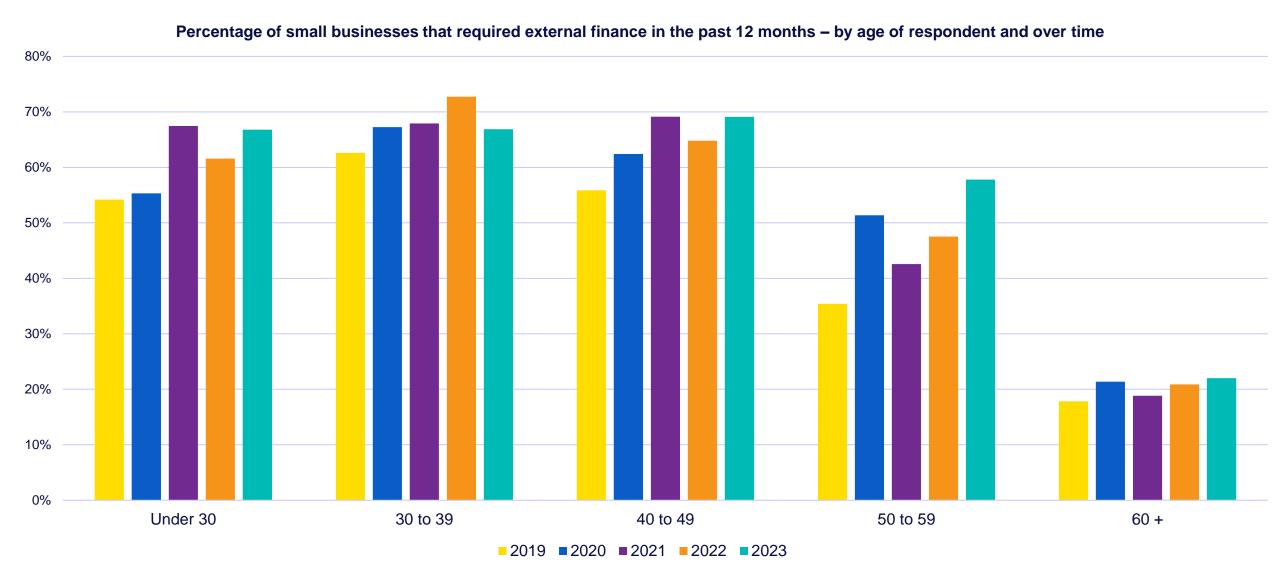

Hong Kong small businesses were the most likely to have required external finance last year. Australian small businesses were significantly less likely to have required finance

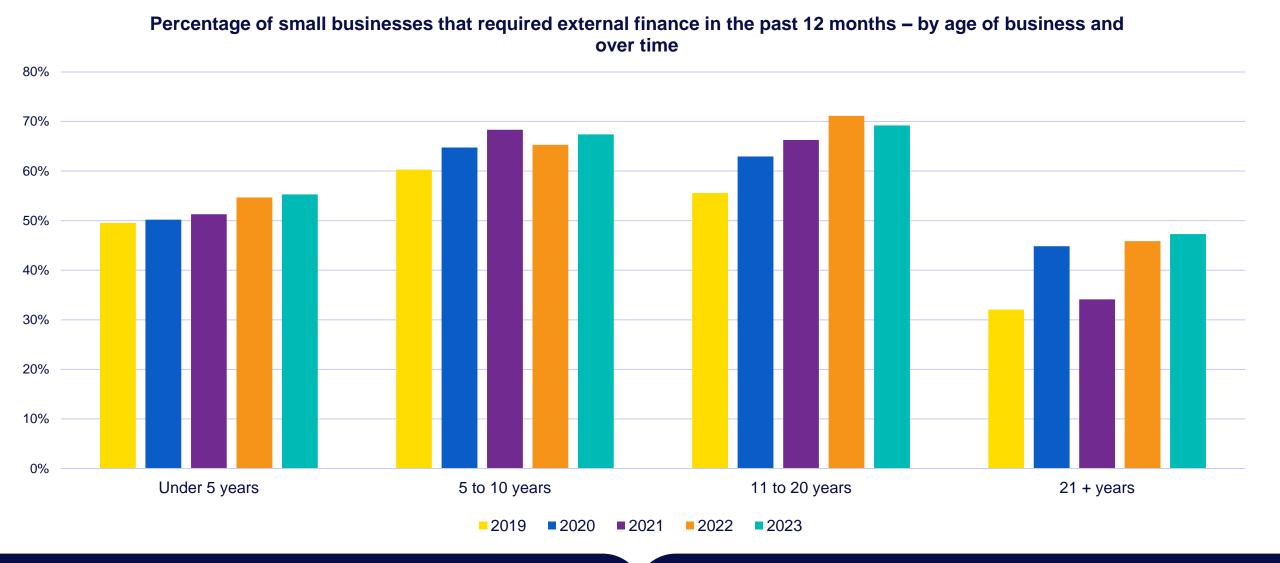

Percentage of small businesses that required external finance in the past 12 months – by market and year

2019 2020 ■ 2021 ■ 2022 ■ 2023

EASE OR DIFFICULTY IN ACESSING FINANCE IN 2023

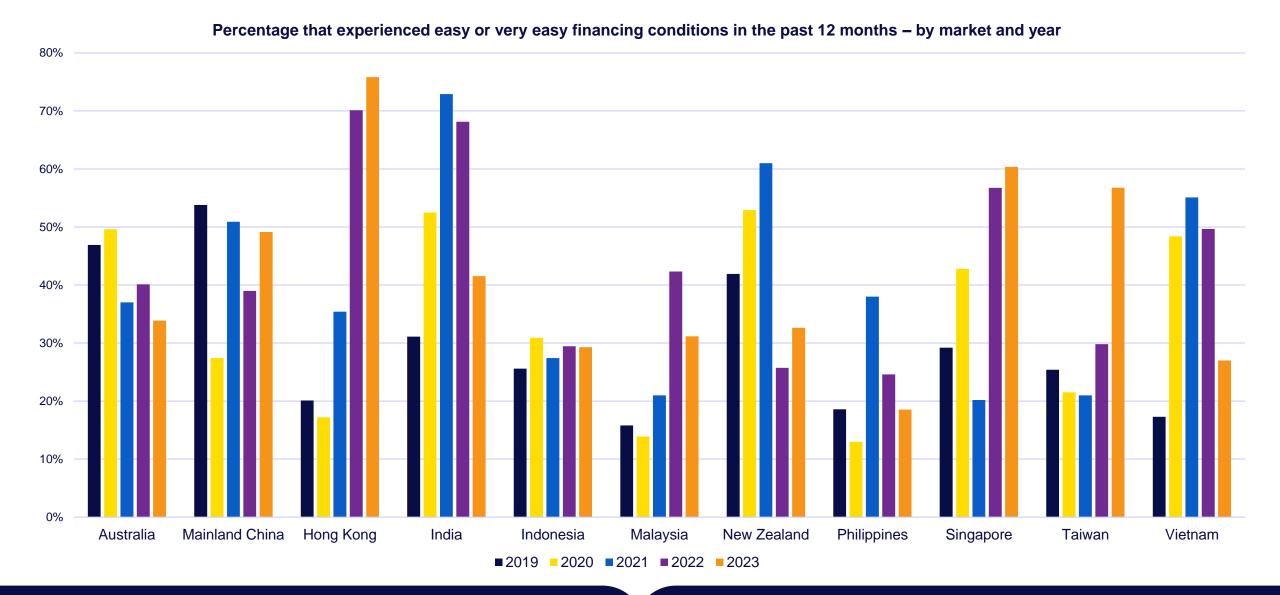

Ease or difficulty accessing finance in 2023

- Seven markets found it more easy than difficult to access finance last year, while four were more likely to find it difficult to
 access finance than easy.
- Financing conditions became significantly easier for Mainland Chinese and Taiwanese small businesses last year.
- Financing conditions became more difficult in Australia, India, Philippines and Singapore in 2023.
- Younger businesses were less likely to report easy access to finance, even though they are often high growth businesses. Such businesses often lack the trading history and security that older businesses have, increasing the risk of providing them finance. Micro businesses were also less likely to experience easier financing conditions last year.
- Business that sourced their finance from crowd-sourced funding reported the easiest financing conditions. Government
 grant/funds were also an easy source of finance.
- Financing from banks was less easy in 2023 than 2022. This could be due to higher interest rates and stricter financing conditions post-COVID.

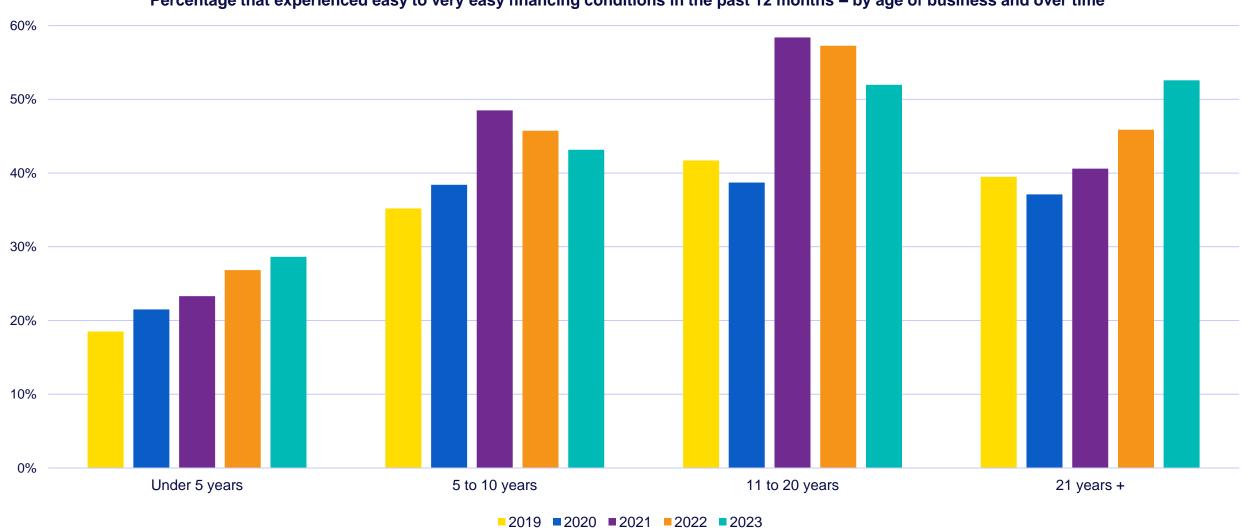

Hong Kong small businesses were the most likely to find easy financing conditions, while Philippine small businesses were the most likely to experience difficulty accessing finance

Financing conditions became significantly easier for mainland Chinese and Taiwanese small businesses and much less easy for Indian and Vietnamese small businesses

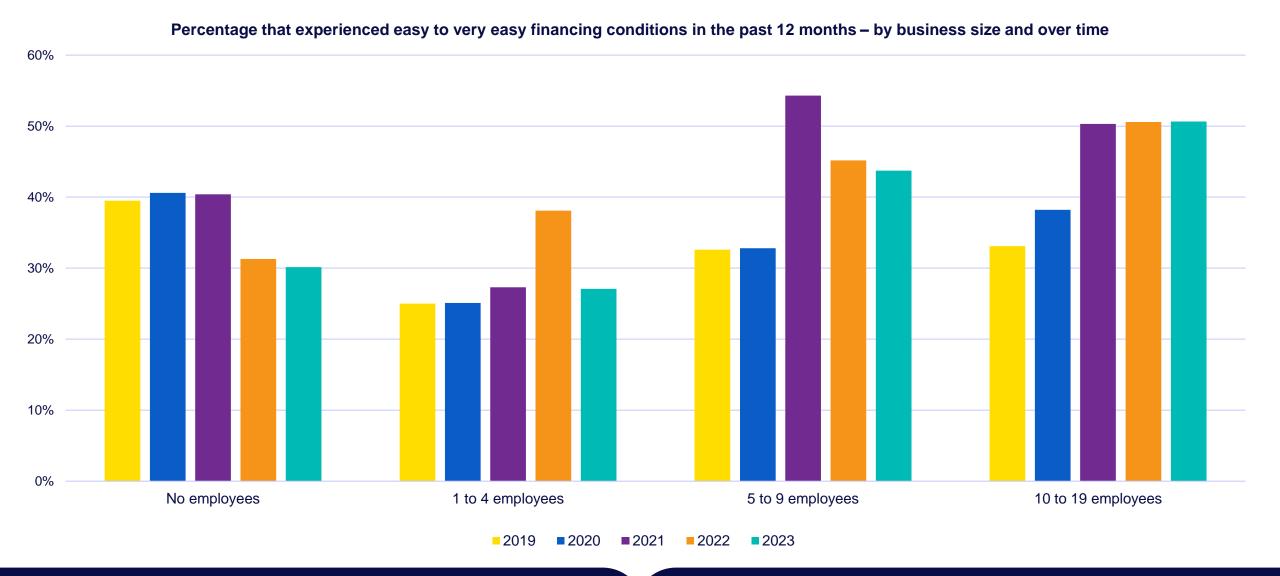

Older businesses are more likely to experience easy financing conditions

- 4. Retail trade 32%
- 5. Agriculture, forestry and fishing 32%

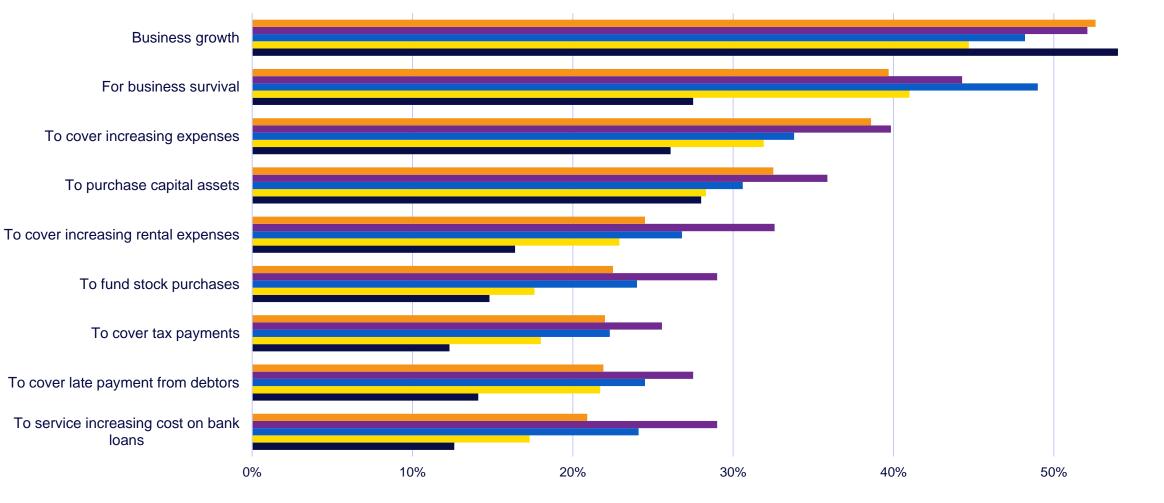

REASONS FOR SEEKING FINANCE IN 2023

Why small business required finance in 2023

- Reflecting a recovery from the pandemic, more small businesses sought finance for growth in 2023 and less used it for business survival. During the pandemic, there was a large increase in the number of businesses accessing external finance for survival.
- Except for Singapore, small businesses were more likely to source finance for growth than survival last year.
- Reflecting that businesses owned or managed by younger respondents and younger businesses are more likely to have grown in 2023, they were slightly more likely to have sourced external finance for growth.
- Larger small businesses were the most inclined to seek external finance for business survival; possibly due to the rising staff costs.

Small businesses were more focused on accessing finance for growth in 2023 and less focused on using it for business survival as was the case during the pandemic

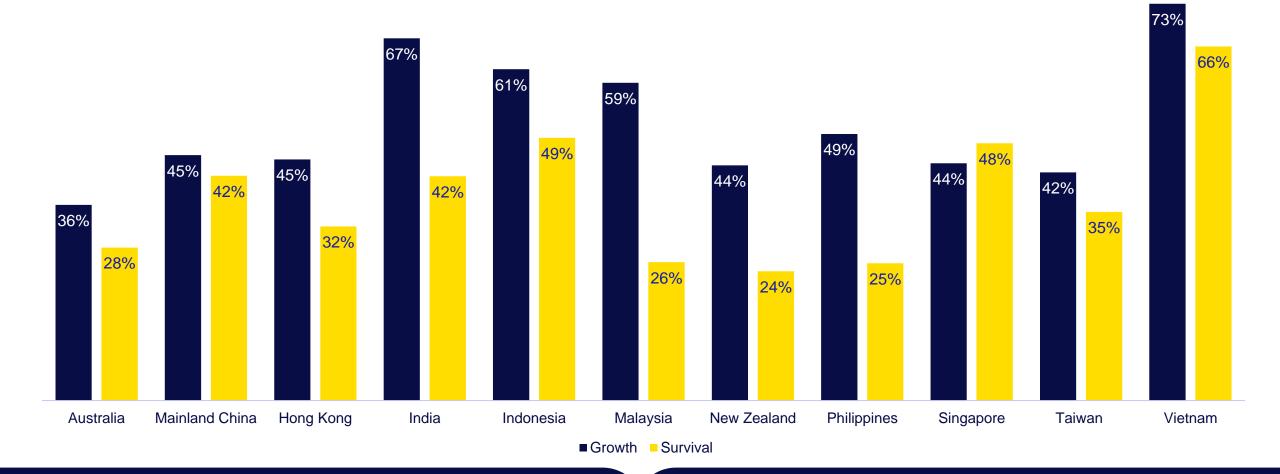

Reasons for seeking external finance in the past 12 months – by year

■ 2023 ■ 2022 ■ 2021 ■ 2020 ■ 2019

60%

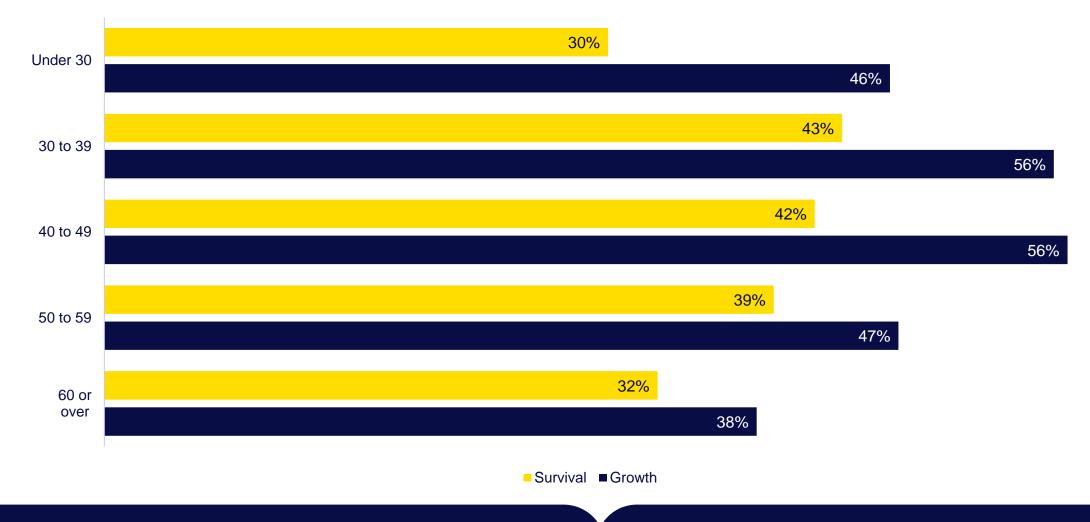

Except for Singapore, small businesses were more likely to source finance for growth than survival last year

- 5. Transport and warehousing 43%

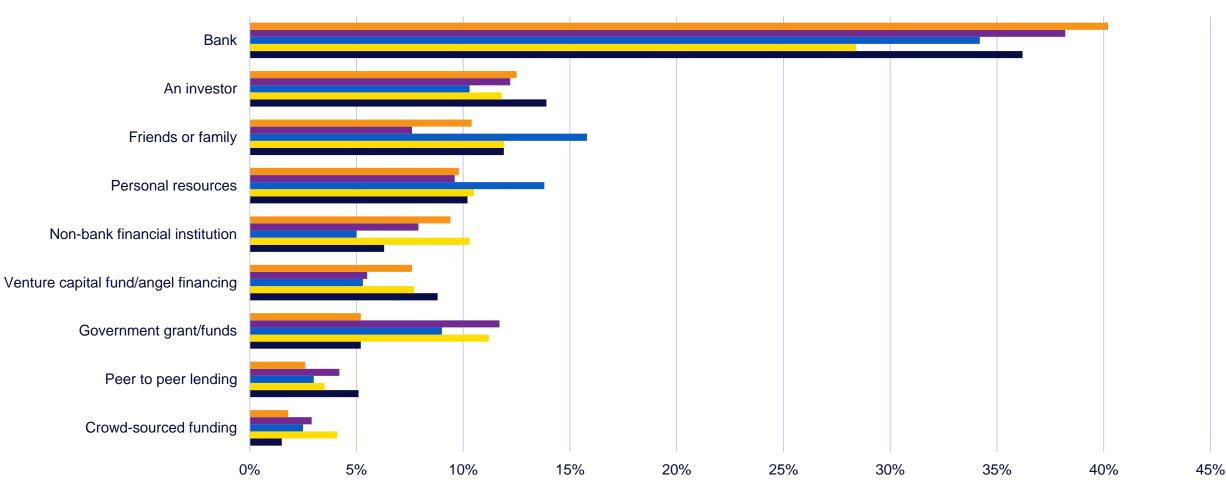

SOURCES OF FINANCE IN 2023

Where small business sourced their finance in 2023

- Banks grew as the most popular source of external finance for the region's small businesses in 2023, regardless of the age of business, age of respondent or business size..
- The popularity of government grants/funds as a source of finance declined in 2023. This is most likely due to governments reducing small business assistance post-pandemic.
- Micro businesses (less than five employees) are more likely to source finance from family and friends and their own
 personal resources than larger small businesses.
- Vietnam's small businesses are by far the most likely to name banks as their main source of funding.

The popularity of banks as the major source of finance grew in 2023, while the popularity of government grants/funds declined

ACCESSING FINANCE IN 2024

Small business expectations for accessing finance in 2024

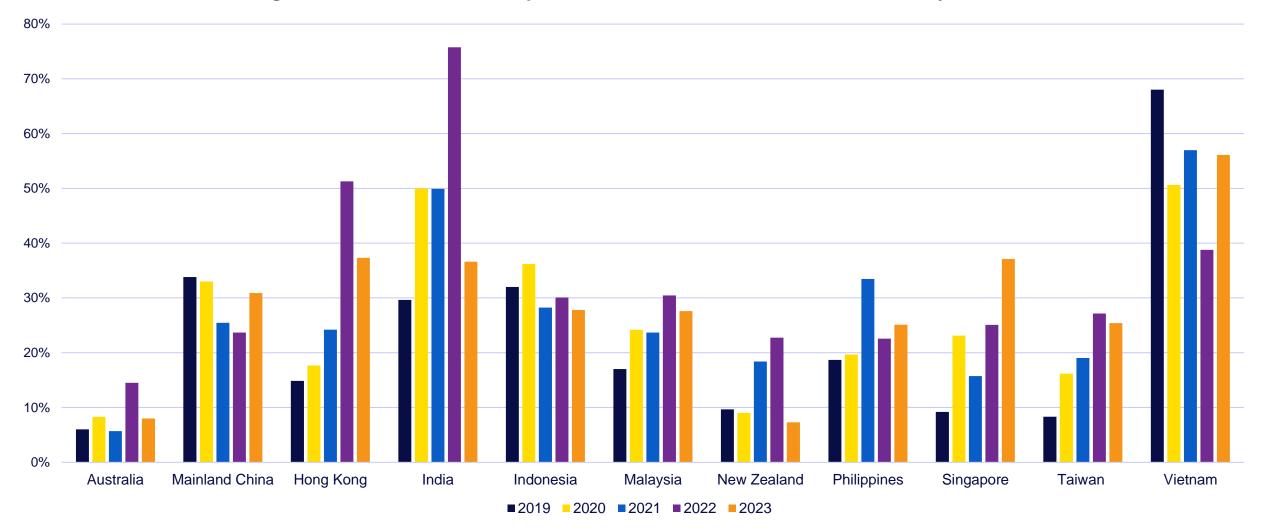

- Most small businesses expect to access finance in 2024, and to use that finance to support business growth.
- Small businesses are more likely to expect easy than difficult financing conditions in 2024.
- Not surprisingly, high-growth markets are more likely to expect to access finance in 2024.
- Financing conditions in Hong Kong, Singapore and Taiwan are expected to remain easy, reflecting positive business expectations.
- Hong Kong has the highest percentage of small businesses expecting easy access to finance, while New Zealand small businesses are the most likely to expect difficult financing conditions.
- Growth is the key reason small businesses expect to seek finance this year. Business survival and covering increasing expenses are also key reasons for expecting to seek finance this year.

Australian and New Zealand small businesses have a relatively low expected demand for finance this year, reflecting the lower growth expectations in those markets

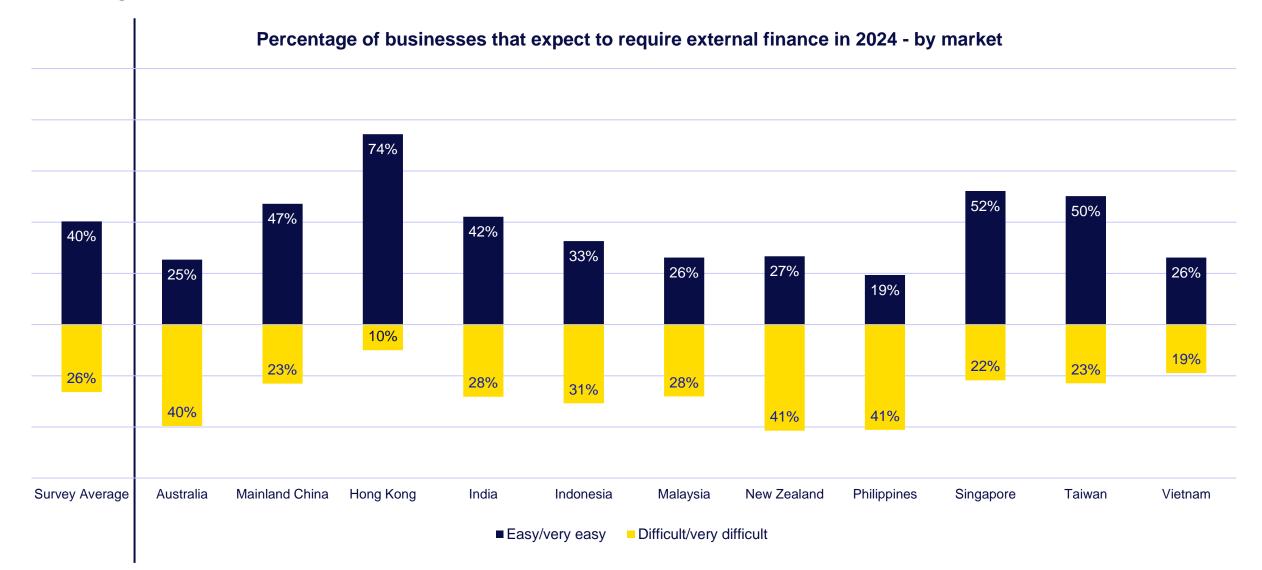

Vietnamese small businesses are the most likely to say they will require finance this year. This reflects positive economic conditions and expected easy financing conditions in that market

Percentage of businesses that will require external finance in the next 12 months - by market and over time

Financing conditions in Hong Kong, Singapore and Taiwan are expected to remain easy, reflecting positive business expectations

Top three anticipated reasons for seeking external finance in 2024 – by market

Sources of business advice

Where small business got their advice from in 2023

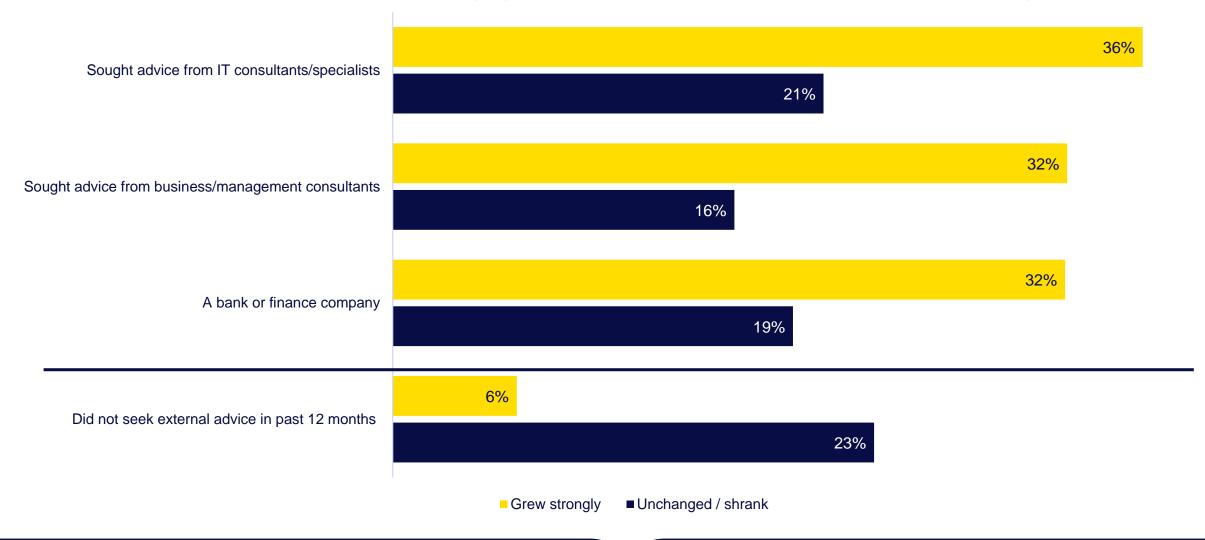

- The top source of advice for small businesses in 2023 was friends and family. With businesses becoming increasingly
 reliant on technology and having to comply with a more complex regulatory environment, they need external professional
 advice to keep up with rapid changes.
- High growth small business are more likely to have sought advice from IT consultants and business consultants than those that did not grow. Given the strong link between technology and growth, and improved business strategy and management and growth, this result is not surprising.
- Nearly all high growth businesses sought advice in 2023, however the same can't be said for those that were unchanged or shrank.
- Australian small businesses were the most likely to not seek advice. This helps explain why small businesses from that market continue to underperform on key drivers of growth including digital uptake, improving business management and innovation.
- Older respondents and micro businesses were less likely to seek advice. This may also help to explain why such businesses underperform on key drivers of growth. We encourage older respondents to begin engaging professionals to help them prepare for exiting their business.
- · Governments remain one of the least used sources of business advice.

Most popular sources of business advice in 2023 – by market

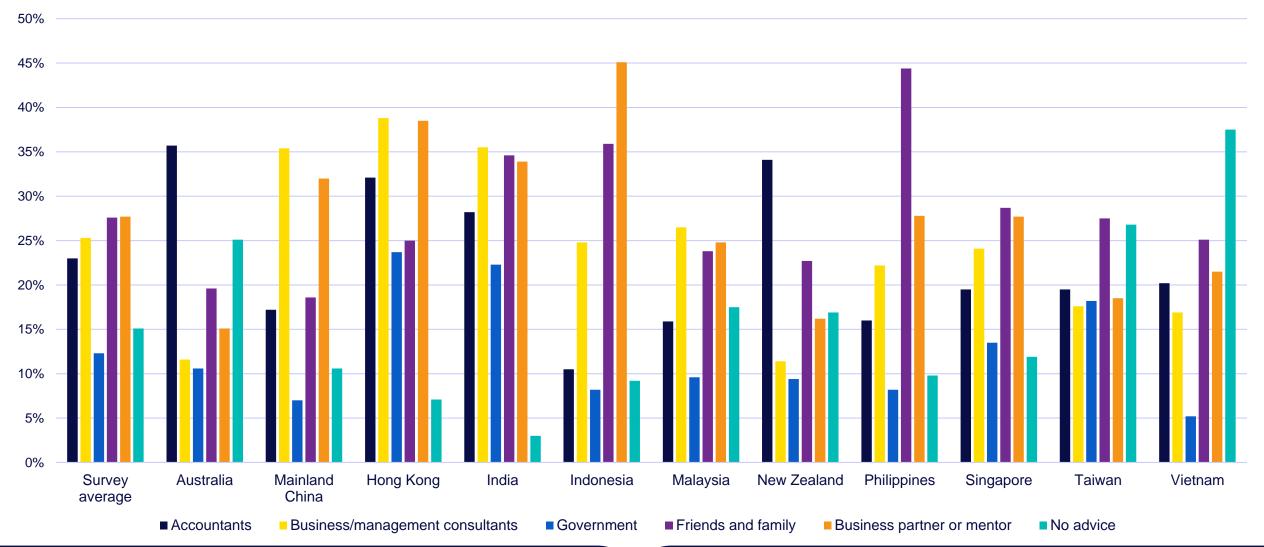

| | Most popular | Second most popular | Third most popular | Did not seek advice |
|----------------|----------------------------------|--|---|---------------------|

High-growth businesses are more likely to seek professional advice

Major sources of advice for high-growth businesses in 2023 compared to those that did not grow

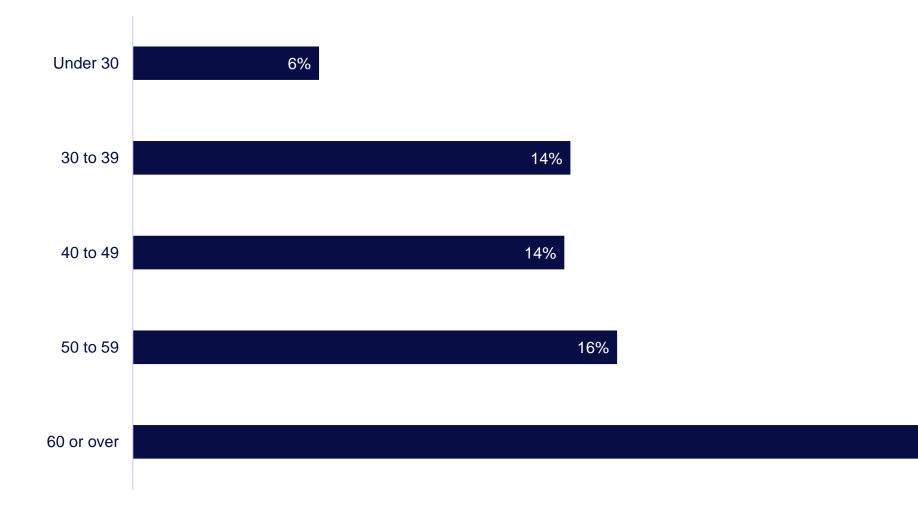

Small businesses in developing economies are more likely to rely on family and friends for advice

Sources of business advice - market

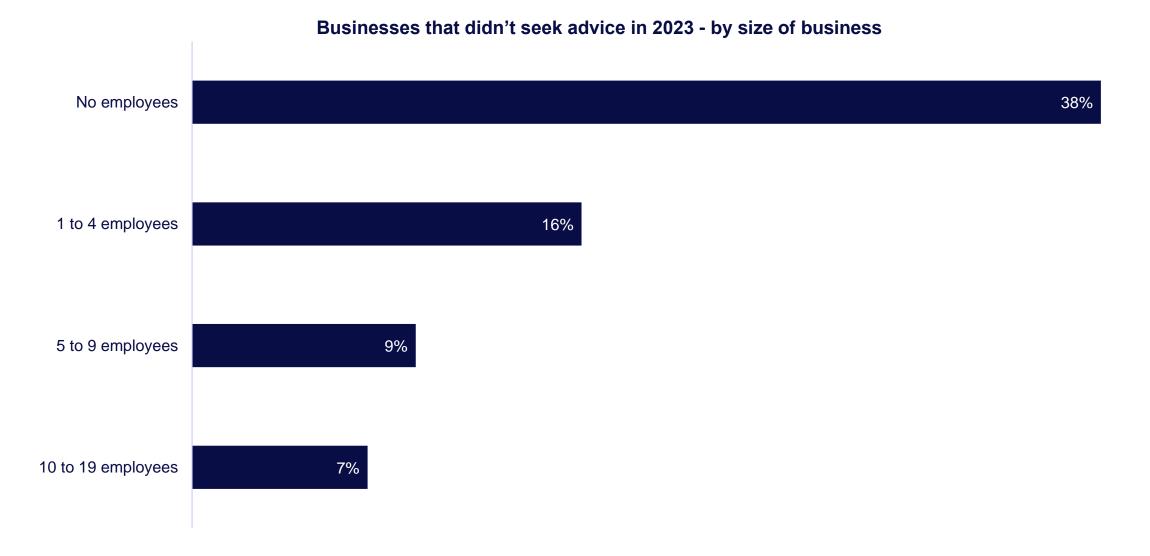

Older respondents are more likely to not seek advice. This may partly explain why their businesses underperform compared to businesses run by younger people.

Businesses that didn't seek advice in 2023 - by age of respondent

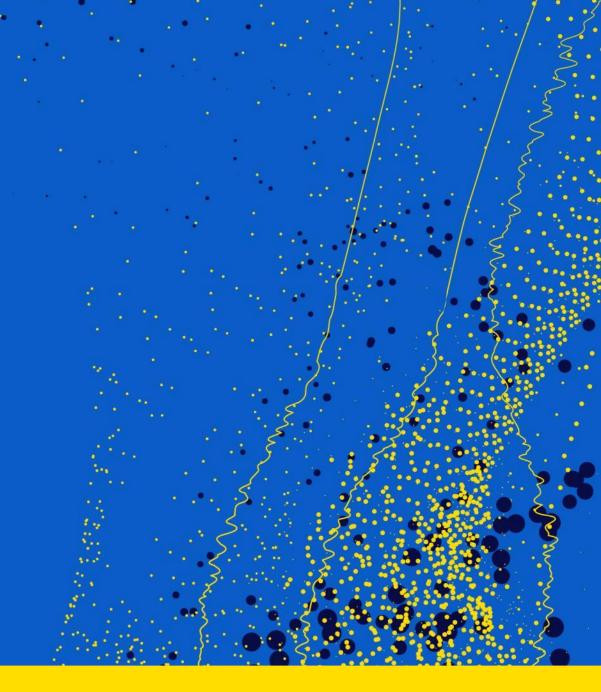

30%

Businesses with no employees are less likely to reach out for help

Motivations to start a business and risk appetite

Motivations to start a business and risk appetite

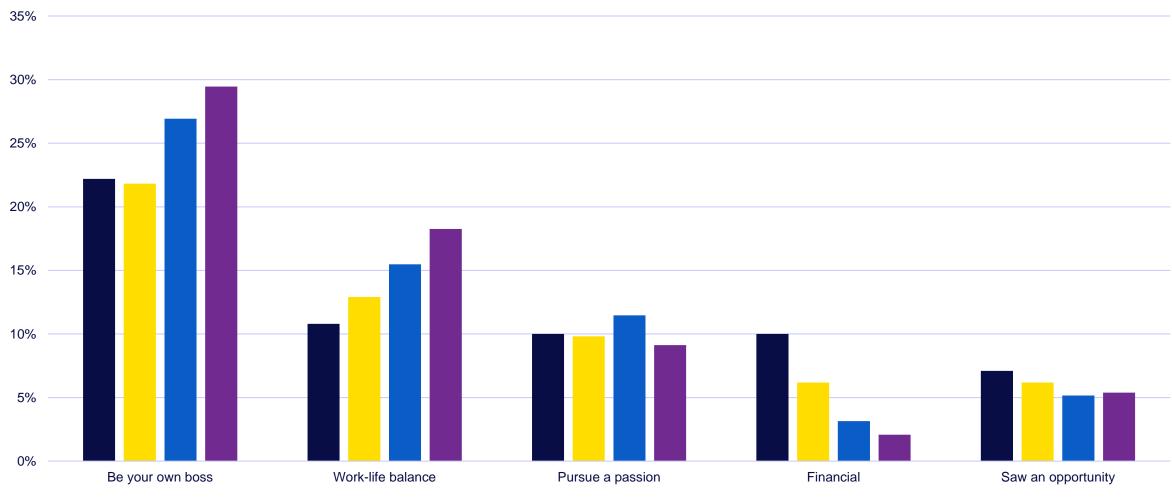

- Business owners were most likely to choose being their own boss as their primary motivation for starting their business. This was the same result regardless of location or whether their business was growing or not. Work-life balance was also an important motivator.
- The issue that concerned business owners the most when they started their business was the possibility of irregular income and cash flow problems. Uncertainty around whether the business will succeed and finding and keeping customers were also important concerns.
- High growth small business owners are most likely to describe themselves as strategic risk takers. That is, they prefer to identify risks, develop comprehensive risk strategies and have back up plans.
- Owners of businesses that aren't growing are most likely to describe themselves as risk averse. That is, they prefer to be cautious, carefully analyse issues, not pursue risky opportunities and seek stability.
- Small business owners from developed economies are more risk averse than those from developing economies.
- Older business owners, older businesses and micro businesses are more likely to describe themselves as risk averse.

Small business owners are most likely to nominate 'being your own boss' as the primary reason they started their business, followed by work/life balance

What was the primary reason for starting your own business

| | Most popular | Second most popular | Third most popular |

Environmental, social and governance and small business

Where small business focused their ESG efforts in 2023

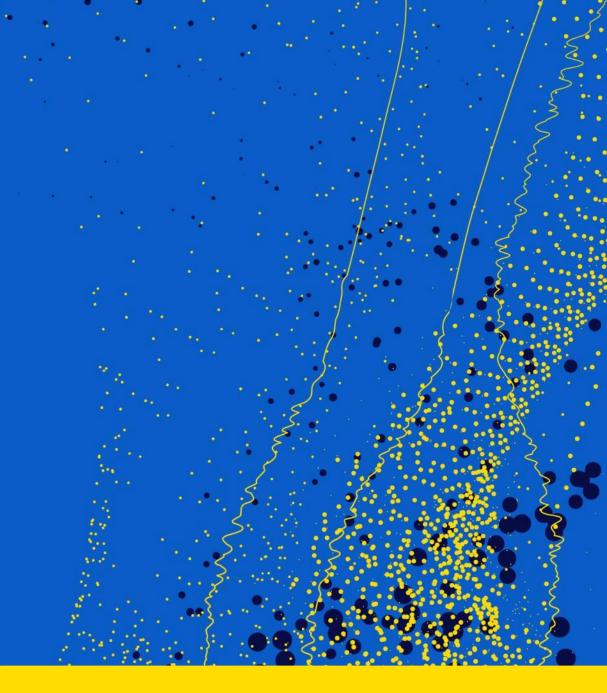

- Most small businesses devoted time and resources to a range of activities linked to environmental, social and governance (ESG) practices in 2023.
- The most common activity linked to ESG that was undertaken was "staff health and safety policies". Given many markets impose legal obligations on employers to provide a safe workplace, this result is not surprising.
- Supply chain sustainability was also a popular activity that small businesses across the region undertook in 2023. This
 could be driven by concerns over supply chain risks that emerged during COVID. It could also be driven by concerns over
 whether their suppliers are meeting their ESG obligations/requirements.
- Business diversity and inclusion policies were also popular among the region's small businesses. This could in part be driven by legal obligations and also a desire to provide a workplace that is attractive to good staff.

Top three ESG practices in 2023 – by market

- Staff health and safety policy is the most popular ESG practice. This is probably due to the legal obligations most governments impose on employers to protect employees.
- It is encouraging to see small businesses in markets such as Australia, Hong Kong, Philippines and Singapore explore more advanced ESG practices.

| | | Most popular | Second most popular | Third most popular |
|--|-------------------|---|---|---|
| | Survey average | Staff health and safety policy (31%) | Supply chain sustainability (26%) | Business diversity and inclusion policy (24%) |
| | Australia | Staff health and safety policy (17%) | Ethics and compliance policy (12%) | Energy and water use monitoring (12%) Supply chain sustainability (12%) |
| | Mainland China | Staff health and safety policy (32%) | Adoption of green and sustainable finance opportunities (32%) | Business diversity and inclusion policy (31%) |
| | Hong Kong | Staff health and safety policy (31%) | Supply chain sustainability (30%) | Renewable energy investment (29%) Adoption of green and sustainable finance opportunities (29%) |
| | India | Staff health and safety policy (42%) | Supply chain sustainability (32%) | Business diversity and inclusion policy (30%) |
| | Indonesia | Staff health and safety policy (30%) | Business diversity and inclusion policy (28%) | Adoption of green and sustainable finance opportunities (28%) |
| | Malaysia | Staff health and safety policy (32%) | Supply chain sustainability (29%) | Business diversity and inclusion policy (27%) |
| | New Zealand | Staff health and safety policy (22%) | Supply chain sustainability (13%) | Ethics and compliance policy (11%) |
| | Philippines | Staff health and safety policy (41%) | Supply chain sustainability (38%) | Energy and water use monitoring (27%) |
| | Singapore | Staff health and safety policy (27%) | Supply chain sustainability (26%) | Environmental management system (EMS) adoption (25%) |
| | Taiwan | Staff health and safety policy (28%) | Business diversity and inclusion policy (25%) | Supply chain sustainability (23%) |
| | Vietnam | Business diversity and inclusion policy (34%) | Staff health and safety policy (33%) | Community and volunteering programs (32%) 184 |

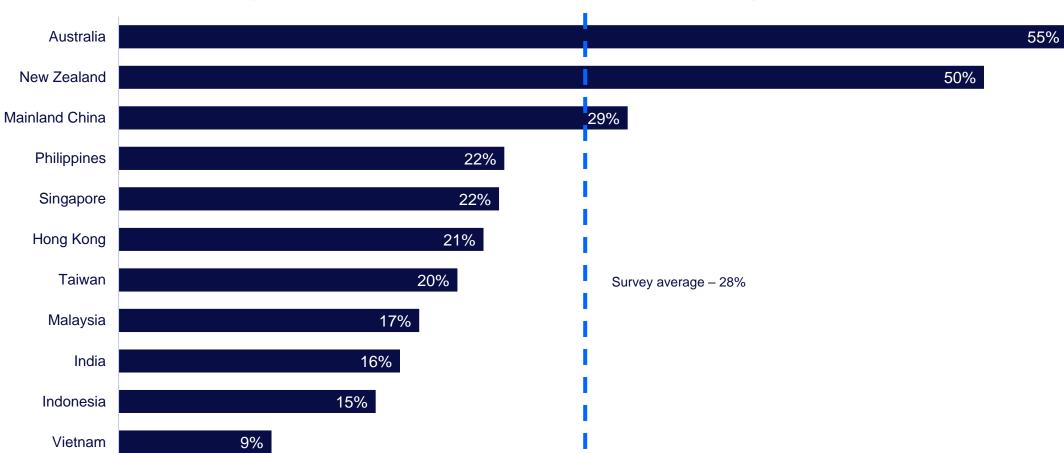

Demographics and their influence on small business performance

Small business demographics and their influence on business performance

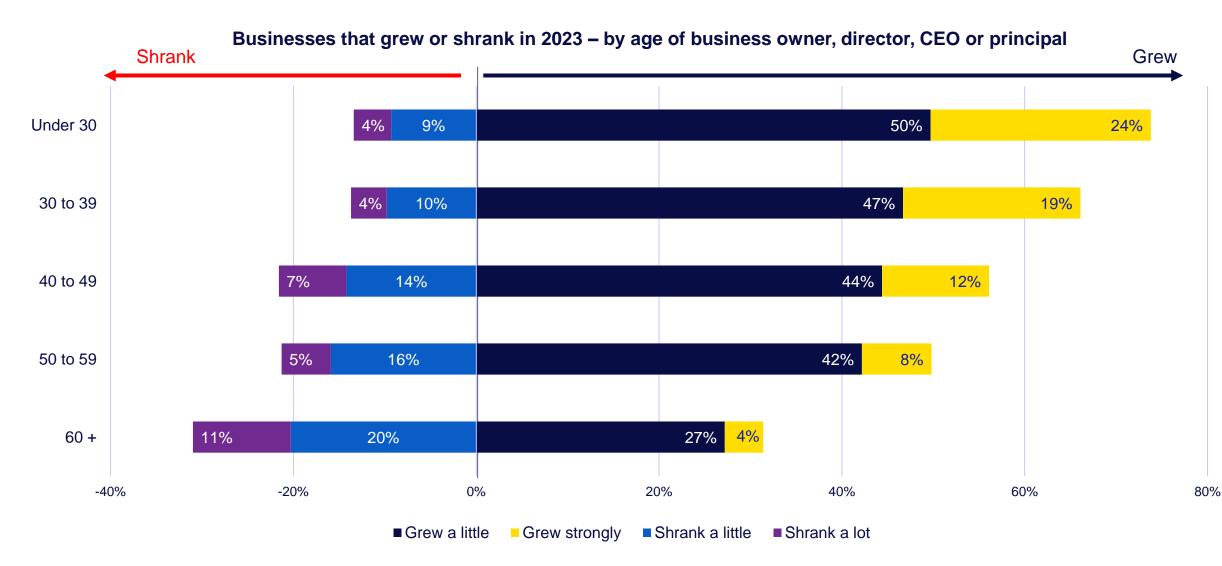

- Younger business owners are significantly more likely to report their business grew last year.
- High-growth markets such as Hong Kong, Mainland China and Indonesia are more likely to have younger respondents, younger businesses and small businesses with more employees.
- Older business owners are more likely to report their business shrank in 2023.
- Australian and New Zealand small business owners are significantly more likely to be aged 50 or over than the other markets surveyed.
- New Zealand and Australia are again the markets most likely to have small businesses established for over 20 years.
- Policymakers from lower growth markets such as Australia and New Zealand should consider how to attract more younger people to start their own businesses or buy an existing business.

Australian and New Zealand small business owners are significantly more likely to be aged 50 and over

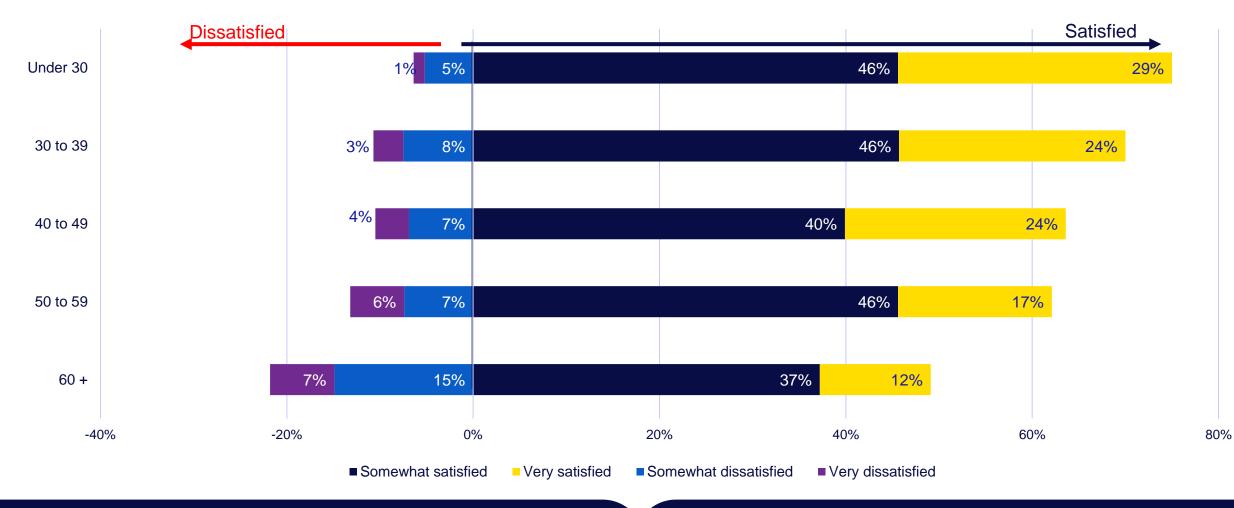

Percentage of business owners, directors, CEOs and principals aged 50 and over – by market

Younger business owners are significantly more likely to report their business grew last year, while older business owners are more likely to report their business shrank

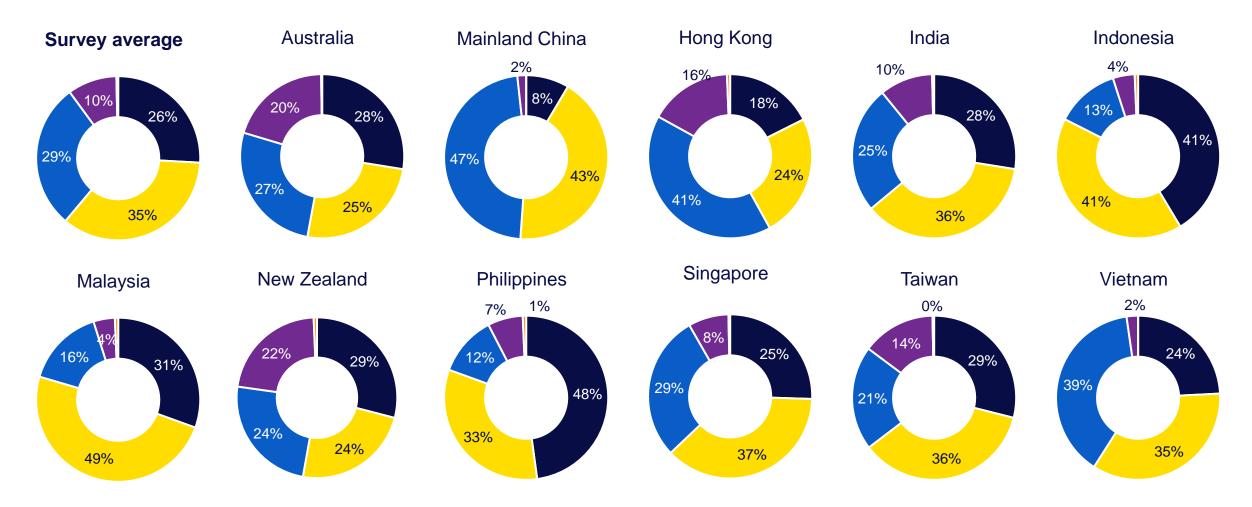

Younger business owners are more likely to be satisfied with the financial return they are getting on their business

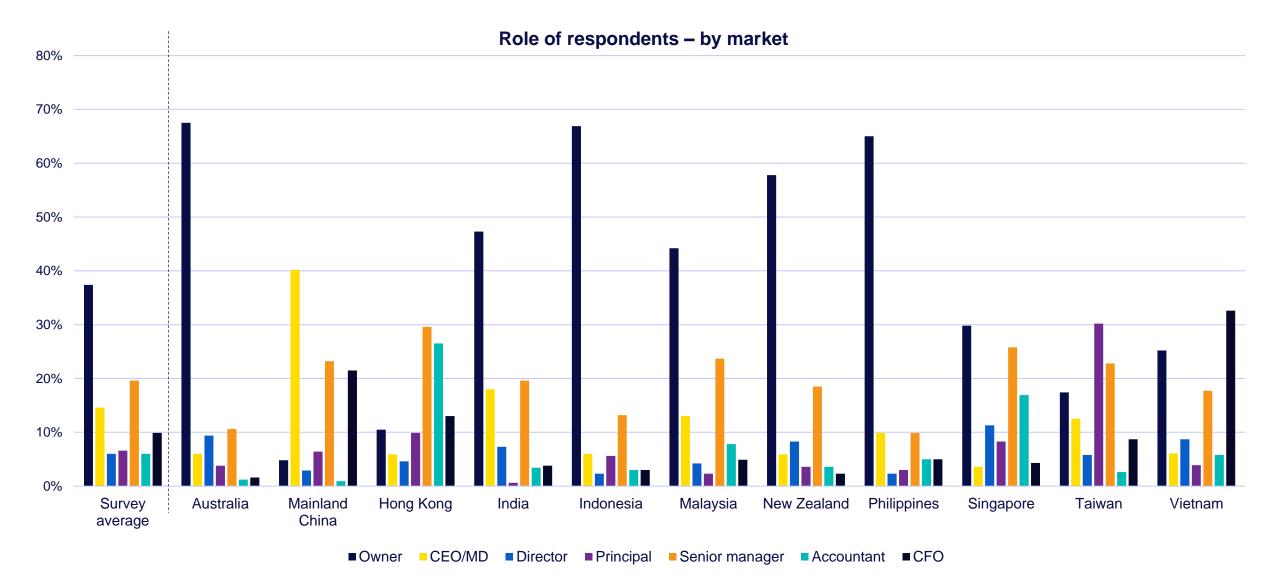

New Zealand and Australia are for the 10th consecutive years, the markets most likely to have small businesses established for over 20 years

Under 5 years = 5 to 10 years = 11 to 20 years = 21 years + = Don't know

Respondents from Australia, Indonesia, New Zealand and the Philippines are significantly more likely to be the business owner

Other results

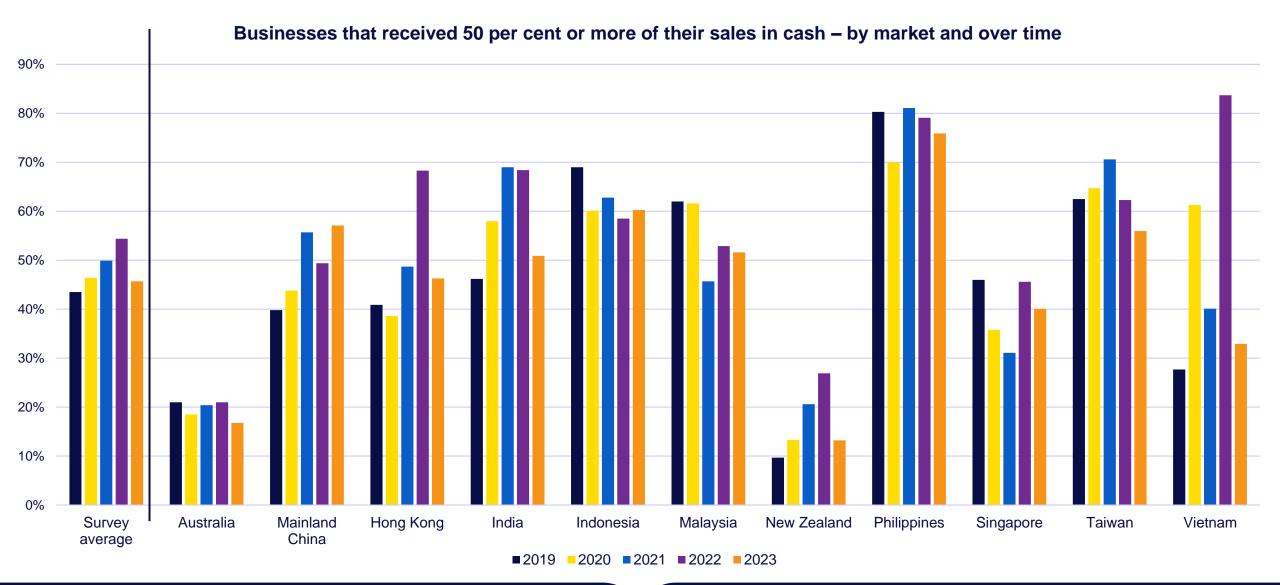

IMPORTANCE OF CASH SALES FOR SMALL BUSINESS

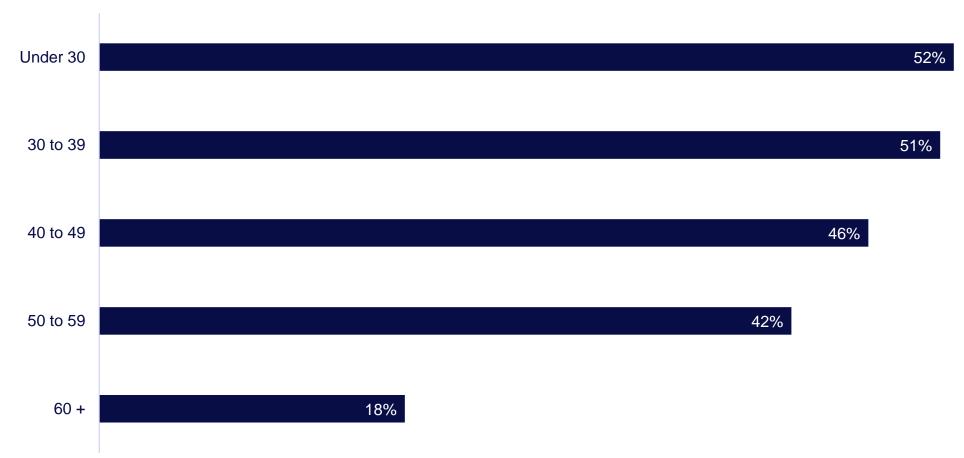

The importance of cash sales to small businesses

- While the survey results show the value of online sales and new payment technologies to small business, cash sales remains very important to many businesses. This is not the case in Australia and New Zealand, where the reliance on cash sales is very low.
- 2023 saw a decrease in the percentage of small businesses that received more than 50 per cent of their sales in cash.
 Mainland China and Indonesia bucked that trend.
- The results indicate that while many small businesses, particularly in developing markets have been quick to adopt digital payment technologies, there is still significant room for improvement as cash can be more expensive to handle and creates risks.
- While older respondents, older businesses and micro businesses are much less likely to rely on new payment technologies, this doesn't mean they take cash instead. They are the age group least likely to receive 50 per cent or more of their sales in cash.

For most markets, the reliance on cash sales decreased last year

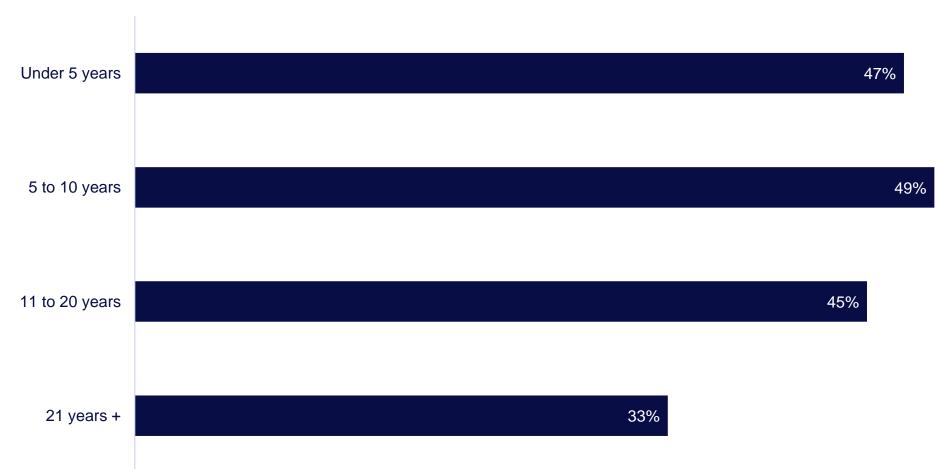

Older respondents are far less likely to rely heavily on cash sales

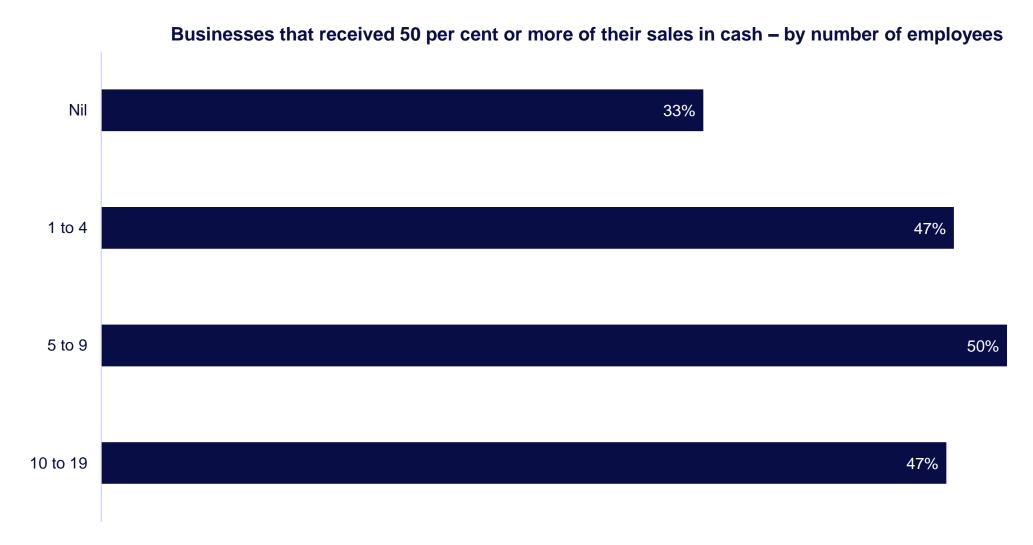

Businesses that received 50 per cent or more of their sales in cash – by age of respondent

Older businesses are less reliant on cash sales than younger business

Businesses that received 50 per cent or more of their sales in cash – by age of respondent

Businesses with no employees are less reliant on cash sales than businesses with more employees

Top-five industries that received 50 per cent or more of their sales in cash

• The industries that were more likely to receive sales in cash are industries that are not likely to be online but instead have a physical presence.
